The Lawn 360 Program is designed to start when your grass starts turning green and is actively growing. A helpful tip is applying it before 3rd mowing, or when the ground temperature consistently reaches 50° F for more than 5 days in a row. After your first application, wait 4-6 weeks to apply the next application.

DON'T FORGET!
Fall is the **MOST** important application of the season/year

APPLICATION INSTRUCTIONS

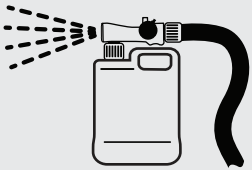

DIRECTIONS:

- Shake product well before use.

PUMP-UP SPRAYER

- Mix 4-6 oz. of Turf Titan product per one gallon of water.
- Apply evenly across lawn.

HOSE-END SPRAYER

- Have your hose pulled out and ready to cover the lawn.
- Determine your plan to cover the entire yard. The product will be gone when 8 gallons of water moves through the sprayer. The higher the hose pressure, the quicker you need to move. If moving slowly, lower the hose pressure.
- Apply evenly across the lawn, wetting the blades of grass.

MOVING SLOWLY - LOWER HOSE PRESSURE

MOVING SWIFTLY - HIGHER HOSE PRESSURE

AFTER PRODUCT APPLICATION

- Water the lawn for 20 minutes.

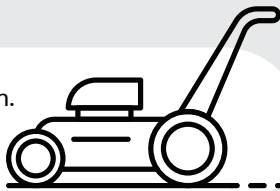

ADDITIONAL APPLICATIONS

- Apply every 4-6 weeks. Consult the Turf Titan Lawn 360 plan for more details.

Mow several days before application. Freshly cut grass is stressed and doesn't utilize products as well.

One 32 oz. bottle of Turf Titan® product will cover 5,000 to 8,000 sq ft depending on how quickly you move through the lawn.

Please read the instructions to get the best results.

FOR BEST RESULTS

A day or two before application, water your lawn thoroughly

Remove weeds before applying product

Apply product to actively growing plants and lawns

Proper application is enough to fully drench the grass blades

DID YOU KNOW?

A basketball court is right around 5000 sq ft
