

144 Volt DC 1500W Electric Heater Replacement Kit

Product Features

Installation:	Various Options Available
Self Regulating:	Increases resistance with increasing temperature to prevent overheating
Small Form Factor:	Compact size is easy to install in place of original heater core
Standardized Size:	Covers a wide range of voltages
Construction:	Plastic Frame provide electrical isolation to prevent short circuit to mounting components

Overview

The CanEv 144 Volt Heater Element & Contactor Kit provides the necessary components to replace the traditional heater core of an ICE vehicle. The powerful 1500-Watt element is available in various input voltage options.

The Kit includes both Element and the Kilovac LEV100 Contactor. (900V ~ 100A with 12V coil)

Specifications

Min / Max Voltage Range: 96 ~ 215 Volt DC

Power: 1500W +5/-10%
3.3m/sec 25±2°C

Inrush Current:
