Temperature Data Logger

Model: 88160

Temperature Data Logger with no required software

Self-contained, small size, displays Minimum & Maximum Temperature at the push of a button. Inbuilt USB - plugs into your computer to set up the name of the location and any alarm points, select the sample rate (from 30 seconds up - see below), maximum 48,000 readings. Unique serial number on each unit to help control traceability. Push and hold the start button when ready and place in fridge. When complete, push and hold the stop button to stop logging, plug USB into computer and save the report to hard drive or print out. Reset the data logger for the next set of readings and place again or keep until needed. Ideal for vaccines, medical, food, transport, etc. With easily replaceable batteries.
