

# HLP New Product Information Sheet.

## Cat 5 - Cat 6 Lan cable tester

### Model Ms6811

This is a very easy to use LAN cable tester. It has a Transmitter ( That plugs into one end of the lan cable ) and a Reciever ( That plugs into the other end of the cable) all in a small sized package. The transmitter is removable from the main unit . This unit can test most lan cables up to 500 meters in length. This tester will detect the following faults- **Short between pairs, Reversed , Incorrect wiring , Shield continuity ( if fitted) and Split pairs..** The test mode quickly identifies any faults in the cable and the location of the fault. A typical test takes less than 10 seconds and multiple faults can be displayed at the same time using the 10 LED display. Very simple to use and inexpensive, this is indispensible for the contractor installing or fault finding data or phone cables. Team this unit with our MS 6812 that identifies the Lan cables without disconnecting them.
