Cat 5 - Cat 6 Phone and Wiring Tacker

Model Ms6812

This is a very easy to use cable tracker. It has a Transmitter (That plugs into one end of the cable) and a Receiver (That is touched to the other end of the cable or anywhere along the insulation) all in a small sized package. The transmitter is either plugged into the Cat 5 or 6 LAN cable socket or using the alligator clips it can be attached to any conductive cable (Disconnect the cable from voltage before using this locator). The receiver will make a sound whenever the cable is within about 10 mm. The volume is proportional to the distance and a sensitivity control is included. You can use this to identify each cable in a bundle and especially helpful when installing LAN cables to identify each end at the switch or router. Complete with a soft carry case and batteries this unit also tests for continuity. For working in loud environments a earphone or headset can be plugged into the receiver. Use this to identify phone, LAN, or any wiring without breaking the insulation. Low cost and easy to use.
