

RESTORING FOREST GARDENS & MANGROVES

We are proud to be supporting two major types of projects

- re-establishing mangroves in Madagascar &
- planting forest gardens throughout inland African nations.

For instance, in Eastern Uganda, 400 forest gardens are being established in the Mount Elgon region. There are approximately 2.5 acres in each Forest Garden. Over a four-year period, local farmers are supported and trained by our planting partners to establish and maintain the forest gardens.

By the end of the 4-year program, farmers have an established and protected forest garden which they can use to sustain their families and produce vital income.
