HYGGER AQUARIUM BIO FILTER BRICK HG-962

Hygger aquarium Nano Bio-Brick is a perfect filter media for aquarium filter system.

ATTENTION: Nice packing will be applied to protect media blocks. Even if it cracks, it will not influence the effectiveness of the bio media.

1. PRODUCT FEATURES

Efficient biological filter media and good water permeability: Hygger bio bricks is composed of countless 0.3 mm diameter nano balls which original material is ceramic heat treated by using the technique of high temperature pelletization over 1300 degree Celsius. High temperature calcinations results in extremely large amount of porous structures acting as mechanical filtration to trap particles as well as biological filtration providing a large surface area to allow beneficial bacterial colonize to grow. Therefore, it reduces the level of ammonia and nitrites. On the other hand, it reacts with any floating organic material in the water column causing an increase in adhesion rate, thus creating clean clear water quickly and effectively. It can also remove harmful material such as $\text{NH}_3/4$, NO_2 , PO_4 , & NO_3 .

Colonize beneficial bacterial: Each brick with the large amounts of tiny holes offers great surface area make it an ideal home for the beneficial microbes to colonize. It's hollow design distributes water flow thus enhance the dissolved oxygen of aquarium.

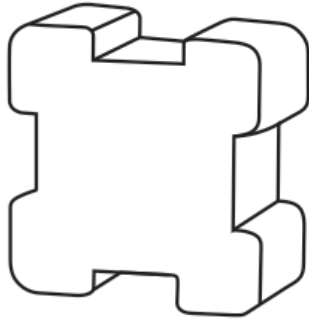

Reusable, Saving Budget: Reusable and long lasting, can be replaced every 3 years or more. Just to remember regular cleaning in case clogged.

Suitable for freshwater and saltwater: It is a neutral filter media helps to keeping your aquarium PH level at 7 or so. Can be used at indoor or outdoor, freshwater or saltwater aquariums, sump tank, canister filter and koi ponds.

ATTENTION: For reef tank, we suggest to complete it with Jaubert system or Berlin system as these bio medias lack of anaerobe. Do not use these bio media as single filter media when build up reef tank filter system.

2. PRODUCT SPECIFICATIONS

Shape: Square

Dimension:

1.77" Length x 1.77" Width x 0.79" Height

3. METHOD OF APPLICATION

- a. Rinse the Nano brick with tank water (Don't rub!) and soak it in tank water for 3 hours, in order to remove the dust.
- b. Stack filter medias in the final stage of filtration or directly into your pond or tank. Then, add some nitrifying bacteria solution. Put filter pad before this biofiltration media, in order to remove floating impurities.
- c. We recommend to periodic cleaning partial bio bricks monthly. Be sure to rinse with tank water in order to keep the nitrobacteria system well.
- d. When the media is ageing, replace partial brick, don't replace all. We recommend replace every 3-5 months.

4. WARNING

- a. Broken or broken off media will not affect its function.
- b. Do not use tap water or hot water to clean the bio media.

- c. Please order the quantity of filter media according to your tank size, quantity of fish and the size of filtration needed. For best results, try to use more quantity of media.
- d. After using the media, please clean a part one time and replace a part one time. Do not clean or change out the media all at once!
- e. Different production series filter media will be several mm difference on size.

5.WARRANTY

- 1. 1-year warranty.
- 2. 1-month free return.
- 3. Free replacement for 3 months.
