

CHAIN CONTROL ALUMINIUM VENETIAN OPERATIONAL GUIDE

Your new chain control venetians are simple to use and operate, please follow the directions below to ensure smooth operation.

Your chain drive is situated on one side of the head box at the top of the blind

Although the chain sits in a loop - for control purposes we will refer to front chain and back chain as it enters and leaves the chain drive

FRONT CHAIN

BACK CHAIN

TO LOWER THE BLIND

To lower the blind pull down on the front chain in a smooth movement, avoid sharp jerky movements

Keep a little tension on the back chain whilst allowing it to move through your hand.

Repeat until the blind is at the desired lowered position, the slats will be facing forwards in the closed position during this operation

TO RAISE THE BLIND

To raise the blind pull down on the back chain, the slats will automatically move to a reversed facing position then start to lift, as before keep movements smooth and controlled.

Keep a little tension on the front chain whilst allowing it to move through your hand

Repeat until the blind is at the desired elevated position.

TO ROTATE/TILT SLATS FOR LIGHT CONTROL

To tilt slats forwards move front chain downwards

To tilt slats backwards move back chain downwards

IMPORTANT

The cord that runs through the slats to lift and lower the blind are wound onto spools within the head box

When blinds are being operated during the lifting and lowering process the base rail can sometimes sit at a slight angle but this will rectify and straighten up when the blind is in the fully up or down position

Once the blind is fully lowered it is important that you stop rotation of the front chain otherwise the mechanism within the head box will start to reverse and the blind will begin to lift again making the blind work in reverse to the above steps, this can upset the balance of the lift and lowering mechanism and the smoothness of operation.

Tension devices must be installed for all chains that hang below - 1600mm up from floor level
Please do not remove warning tags from blinds.
