

### The Eco-Friendly Coffee Tray Crafted from Singapore's Coffee Waste

Did you know that every year, 15 to 20 million tons of used coffee ground (UCG) are generated worldwide? With Singapore being a global “coffee hub”, the country is no stranger to this alarming wastage, with over 10,000 tons of UCG being incinerated yearly.

ipse ipsa ipsum is a pioneer and supporter of green technologies that power sustainability in innovative ways -- a major aspect that the Restaurant Asia fair represents.

Influential as ever in Singapore’s culinary scene, Restaurant Asia is a platform that elevates, networks, and launches different F&B sectors to the global stage. For this year’s exhibition, we’re introducing the latest game changer in ipse's sustainable roster: the eco-friendly polymeric composite coffee tray!

UCG composite products are durable, and provide good insulation that make them an ideal alternative to traditional plastic or paper trays. By opting for this material, we cut production costs while reducing UCG incineration -- a win-win for both business and the planet and made in Singapore!

Catch ipse ipsa ipsum at the event on 25-27 May at The Sands Expo and Convention Centre, Booth RB21.
