

AC730

JESMONTE
MADE FROM
TE[®]

About AC730

Jesmonite AC730 is a rapid setting acrylic modified cementitious composite. It is a shrinkage compensated material of low permeability, with reduced free-lime content leading to major reductions in efflorescence in comparison with ordinary Portland cement systems.

Jesmonite AC730 can be custom matched to a wide range of bespoke colours.

Jesmonite AC730 achieves a Non-Combustible A2-s1-d0 EN13501-1 Fire Classification.

AC730 Applications

Jesmonite AC730 is primarily designed for glass reinforced, lightweight, hand laminated decorative applications, but it can also be used for small decorative castings. Jesmonite AC730 contains a fine decorative aggregate and powder pigments, carefully controlled to achieve a consistent decorative surface finish.

AC730 Key Benefits

Stronger

Strong, flexible, and more durable, with an increased impact resistance.

Lighter

Lighter than stone, concrete and traditional sand and cement products.

Safer

Independently fire rated in accordance with European Fire Classification EN 13501-1. Solvent free with no VOC's.

Finer

Replicates the very finest detail with superior weathering qualities.

Greener

Water-based making it kinder to the environment.
