Effective: 0°F

Color: Reddish Pink

Bag: 50lbs

Shipping: 49 bags per pallet, 18 pallets per truckload

You would think a red product would have some dye, right? Contrary to what you might think, the combination of sodium, calcium, magnesium, and potassium chloride give this product a natural reddish hue.

This product is referred to as “spreader salt”. What does that mean exactly? It’s a perfectly conventional salt to throw into a hopper. While it’s effective temperature is a bit higher at 0F, it’s still plenty low enough for most of the winter.
