## INSTALLATION INSTRUCTIONS

**PART No.**

**FB21110**

**Jeep® JL Wrangler  
2018-Current Light Bracket - Cowl**

**1) REMOVE OEM WINDSHIELD SUPPORT (COWL) BOLTS**

If you already have aftermarket parts installed, remove them. Using a T40 Torx bit, remove the two top bolts and washers from the vehicle's windshield support/cowl.

Secure it by replacing the Torx bolts and washers.

Repeat steps 1&2 on the opposite side.

**2) INSTALL LIGHT BRACKET**

Place the bracket into the holes, spacer side down, with the slotted flange pointing towards the center of the vehicle.

**\*NOTE\***

If you are installing the light bar brackets with the foam backing you will need to apply pressure to the light mount when installing.
