There are three (3) installation methods depending on your Jeep's current configuration. Please follow the instructions accordingly:

- A. Hard top with top on
- B. Hard top with top off
- C. Soft top\* – with top up or down

### A. FOR HARD TOP MODELS WITH TOP ON:

#### 1) REMOVE HARDTOP BOLTS

Remove the two inner T-40 hardtop bolts on each side.

#### 2) INSTALL STORAGE BINS

Place storage bin either above or beneath hardtop lip.

Note: If your JL Model is equipped with the factory Subwoofer, the passenger side wheel well bin will not fit.

**\* WILL NOT FIT 2DOOR MODELS**

2510000

Either using all of your OEM hardware, or the supplied four (4) knobs and washers, secure the storage bins in place. Reuse your factory hardware to finish securing your hard top.

**NOTE: Hard top Jeeps will not use the supplied bolts.**

#### B. FOR HARD TOP MODELS WITH TOP OFF:

##### 1) **INSTALL STORAGE BINS**

With the top already off the Jeep, simply place the storage bins on top of the Jeep tub and align above the factory holes. Secure in place using the supplied knobs and washers and utilize the OEM hard top nut with clip.

#### C. FOR SOFT TOP MODELS

##### 1) **INSTALL STORAGE BINS**

With or without the soft top on (or down), pull back the carpet and screw in one of the supplied bolts into the OEM nut plate just below the plastic C-pillar.

# INSTALLATION INSTRUCTIONS

**PART No.**

**FB25100**

**Jeep® JL 4DR\* Wrangler  
Wheel Well Storage Bins**

Do so until 1 to 2 threads are visible.

Repeat on the opposite side.

**ENJOY YOUR NEW FISHBONE OFFROAD STORAGE  
BINS!**

Push the bin's bracket under the pillar and over the bolt threads until it sits evenly with the tub rail.

Secure the remaining bracket with either your OEM Torx bolt or one of the supplied quick knobs and washer.
