

How to attach the ceramic light pull

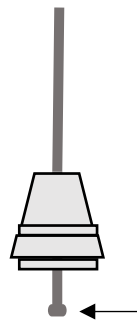

The two holes are for a chain to be attached and so the ceramic pull can be used as a cistern pull if required

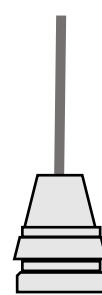

Unscrew the brass or chrome top from ceramic pull.

Thread the light pull string through the hole in the top and tie a small knot. Pull as tight as you can and cut off any excess.

You can always use a lighter to melt then end of the cord to form a blob so the cord does not pull back through the hole.

Once the knot is tied or melted you can then screw the brass or chrome cap back onto the light pull.
