

## About Our Stitch and Glue Kits

Your kit will include all materials required by the designer necessary to build your personal stitch and glue watercraft. All of Noah's Stitch and Glue kits are assembled with European made BS 1088, Lloyds Certified Marine grade Okoume Plywood. All kits include the following:

- ARK Composite Epoxy: Every stitch and glue kit is supplied with the needed amount of epoxy to complete the kit provided.
- Premium US Made Fiberglass
- Sheer Clamps
- Gunwales/ Rub Rails/ Trim Pieces: Depending on the type of kit, these pieces are included. Ash is standard with the option to upgrade to Cherry, or Walnut.

Other materials may also be included as specified by the designer. Varnish and paint are not included. Noah recommends Epifanes Polyurethane over top the epoxy. Two-part polyurethanes adhere better, are tougher, have a better gloss retention, are buffable and can be applied "wet on wet" without sanding in between coats.

### **SHIPPING**

Most stitch and glue kits can be shipped courier between \$100-\$200 for most destinations, however, some kits with wider plywood panels will have to be shipped freight. We will contact you with exact charges before shipping, You can always pick up from our Toronto or Buffalo locations.

We hope this information helps you in choosing the right stitch and glue kit for your needs. If you have any questions or concerns, please don't hesitate to contact us.
