

Forever Garden Raised Bed Corners

Create custom, durable, and attractive raised beds with your own lumber.

Use 2 sets of Raised Bed Corners to form 4 right-angled corners.

Parts included with each set:

- (2) Corner Connectors
- (2) Corner Caps
- (8) 1 1/4" Phillips Screws

Assembly is a breeze! All you need is a drill with a Phillips bit, a rubber mallet or hammer with a block (for tapping), and a saw if you plan to cut your own lumber.

Building Your Bed:

- **Get creative with lumber!** We recommend using any standard, pre-cut (milled) lumber that's 2 inches thick (like 2x6s or 2x8s).
- **For long-lasting results:** If you choose pine or another softwood, consider applying a food-safe wood preservative* to protect your bed from weather and extend its lifespan.
- **Perfect fit, easy access:** Choose lumber boards that match the height of the raised bed corners you purchased. Remember, for optimal planting and maintenance, we recommend keeping your raised beds no wider than 4 feet.

Building Your Garden:

- 1. Find Your Perfect Spot:** Choose a level area with plenty of sunshine for your plants to thrive. If you're placing the bed on grass, removing the sod first will give you the best results.
- 2. Assemble the Frame:** Simply slide your chosen lumber boards into the designated slots of each Raised Bed Corner to create the bed frame.
- 3. Level Up:** Ensure all the boards are fully seated and sitting level for a sturdy and even foundation. Refer to Figure 1 for a visual guide (if applicable).
- 4. Secure the Corners:** Using Phillips screws, firmly connect the boards to the corners. This will lock everything into place.
- 5. Finishing Touches:** Gently tap a corner cap onto the top of each corner using a rubber mallet. Alternatively, you can use a hammer with a block of wood for cushioning to avoid damaging the cap.
