

How long has alleged systemic election fraud been happening in Michigan?

In the Nov 2017 Detroit City Clerk Election, contender Gilchrist had an early lead on election day, and then a surge in absentee ballots put Janice Winfrey (Detroit City Clerk since 2005) into the lead to win by only 1,486 votes (1.51%).

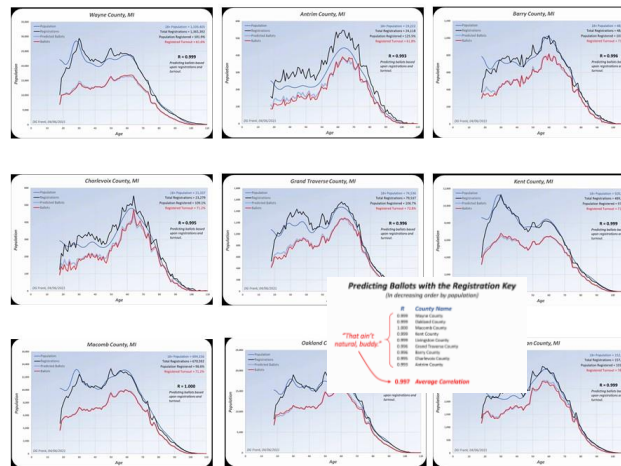

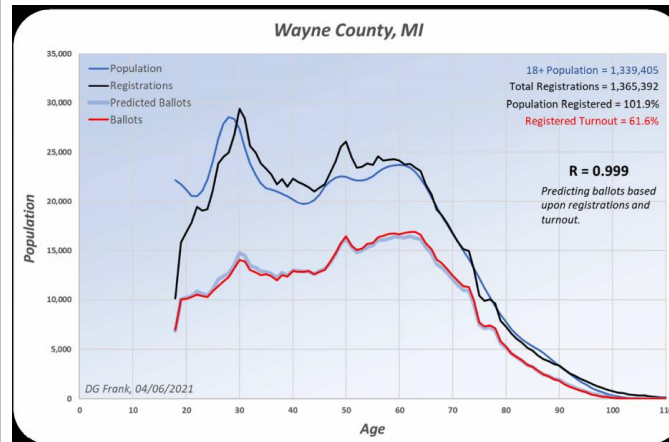

In the Aug 2020 Primary Election for the Wayne County Prosecutor, contender Burton-Harris had a lead during the day from in-person voting, but then the reception of absentee ballots thrust incumbent Kym Worthly ahead to win.

In the Nov 6, 2018 MI election for Attorney General, Dana Nessel won by only about 115,000 votes (2.7%) against Tom Leonard. This election had over 4M total votes and used the voting machine computers for counting.

In the Nov 2020 General Election, Trump (President) and John James (US Senate Contender) had large leads on election day, then a late surge in absentee ballots caused them to lose.

Are you noticing the pattern yet?

Population vs. Age Election Data - Nov 2020 Michigan General Election

Data Sources:

- 1) Population data from census.gov (estimates as of July, 2019)
- 2) State registration database labeled October 2020, downloaded Nov 6, 2020
- 3) State Voter Database from Jan 2021

- Official election results predicted with greater than 99% accuracy using an algorithm based on registration data
- MI Counties Analyzed:
Antrim | Barry | Charlevoix | Grand Traverse | Kent | Livingston | Macomb | Oakland | Wayne

Dell OptiPlex 5270 All-In-One Computer

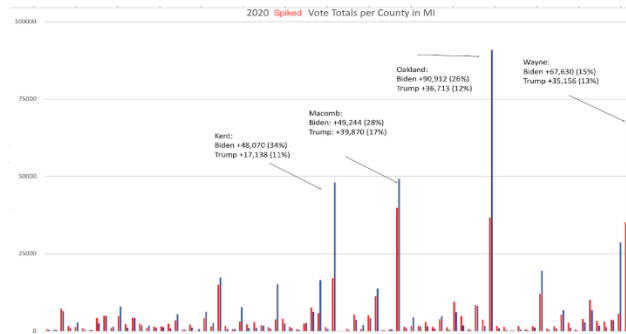

Were all of the wireless connectivity capabilities fully, completely removed from the AVCB Network, or not?

Statistical Analysis of Michigan 2020 Election Data

Michigan Election Data Statistical Impossibilities

Statistically impossible jumps in the Biden vote counts really did occur in the election results early on Nov 4, including one jump comprised of +141,257 votes for Biden with a probability of occurrence of 1 in 10^{117} , impossible for an organic election.

Sudden injection of 384,733 ballots across 4 Michigan counties (Wayne, Oakland, Macomb, and Kent) early on Nov 4, 2020. However, in a timespan of a few hours, the physical limitations of the election counting equipment at these locations would have allowed a maximum of 94,867 ballots to be counted, so 289,866 more ballots were "processed" than physically possible.

Moving Forward

- We must return to pure, hand marked paper ballots only in our elections
- Full 100% forensic audits of all ballots and election infrastructure in Michigan

Voting Machine Computers

These are incredibly high risk, and the overwhelming evidence is conclusive that our election infrastructure has been completely compromised by fraud and corruption.

Corruption in Michigan Elections

Detroit has a reputation for having the worst corruption in their elections in the entire country, and this corrupts the Michigan statewide elections. Do you honestly believe this is an accident? The people of Michigan and Detroit deserve better. You deserve better.
