

Glass Benchtop Water Filter

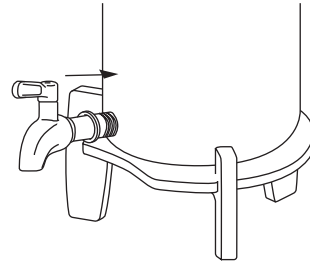

Tap Assembly

The tap consists of: the tap itself, 2 x rubber seals, 2 x metal seal caps and a nut that tightens all pieces

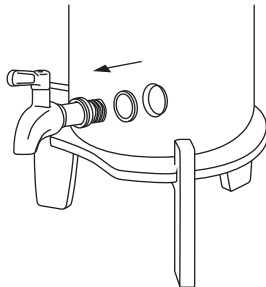

1. Separate Parts

Undo the nut, metal seal caps and rubber seals from the tap and ensure you have the tap, 2 x rubber seals, 2 x metal seal caps and a nut to fasten the pieces together.

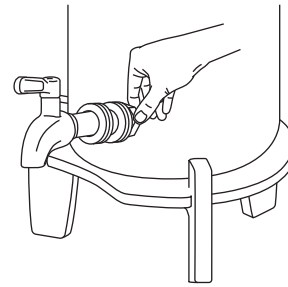

2. Insert Tap

Add 1 x metal seal cap, followed by 1 x rubber seal to the tap thread and insert the tap into the product main body ensuring the rubber seal is on the outside of the product body.

3. Ensure Water Seal

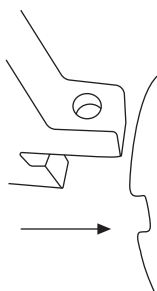

Add the second rubber seal to the tap from the inside of the main body, then add the second metal seal cap against the rubber seal. You should now have a rubber seal on each side of the product main body and a metal cap securing each rubber seal.

4. Tighten Tap

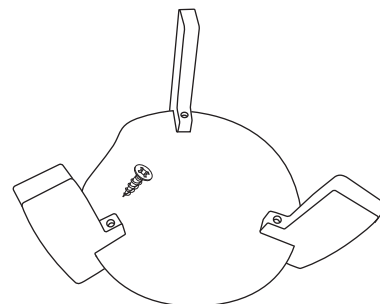

Now add the nut from the inside of the main product body against the metal seal cap and tighten with care by hand until a firm grip is achieved and does not move. If required, use the provided spanner to very carefully tighten.

Bamboo Base Assembly

1. Attach legs to base

Remove the bamboo legs from their packaging and attach the 3 x legs in the 3 x slots of the bamboo base. Ensure they are pushed into the base firmly and as far as possible to leave no gap between them.

2. Screw in the legs

Turn the base upside down and screw in each of the legs with the provided screws and screwdriver (or carefully with a drill). There are no guide holes as bamboo is softer than hardwood so be careful not to overtighten screws as this may cause damage to your base.

Caution: Do not overtighten as this could damage or break the glass and the stand.
