

The Wand Series B Tonearm®

v2 March 2024

The Wand Series B is the biggest change in design in the ten-year history of the arm. It is particularly aimed at addressing the installation issues of some users. The key changes for this are the introduction of a plastic protractor, a change in rear weight system and new micro mount system.

The other big change is the change to black finish, part of the logic in the change of name to Series B (Black). Strictly speaking it should be Series 5 but fits the change to black for the Series B Wand 14-4 turntable.

- Matt Black carbon fibre & Black finish parts.*
- New rear weight system.*
- Rear stud fitted to arm to hold plates when changing.*
- Mounting assembly shipped assembled.*
- New wire guidance and clamp system.*

Micro Mount System

The new system allows users to adjust the overhang using a screw thread with extreme accuracy (0.5mm or 20 thou per revolution). A quality German screwdriver is provided and is used for all settings.

Plastic Setup Protractor

The new plastic protractor condenses ten years of experience into this setup multi tool. Used for initial positioning, Overhang & VTA

Refined Model Structure

Wand Master (right) is simplified and absorbs the Master Lite model. It keeps the VTA tower, Zirconium Oxide bearing and wiring upgrade. Matt Black standard (Gloss black option for armtube)

Wand Plus (left) keeps Cardas wiring.
