

Wand 14-4 Master Turntable

v3-2 March 24

Secondary arm mount (9"-14")

Series B arm with Matt black carbon fibre.

Matt Black carbon fibre motor mount (and switch surround)

Matt Black carbon fibre record mat and outer ring.
Wand Weight™ shown (optional)

Silk finish carbon fibre top plate.

Wand Master Iso base unit. Contains EV batteries and Isoacoustic® levelling feet. Also available as an upgrade for the standard 14-4. Bolts to 14-4 suspension.

Isoacoustic® feet fitted to Master Iso Base unit. Easier levelling. Gains in both shock isolation and sound quality.

The Wand 14-4 Master Turntable is a new release and builds on the acclaimed* design of the 14-4 turntable by adding the Wand Iso Base unit that enhances the performance of the 14-4 by improving its isolation from vibration and electrical noise. It is also available as a retro-fit unit for existing 14-4 turntables.

-Electrical isolation is gained by using a battery supply built into the base (Also separately available as The Wand EV). This can run for a day after an overnight charge. The battery supply also significantly improves the perceived dynamics and resolution

-The Isoacoustic® Gaia feet are an added tier of isolation and complimentary to the Zentroidal™ isolation system in the 14-4. As well as a gain in resolution there is added foot fall isolation. The Gaia feet are located with one at the back and two at the front for ease of levelling.

-The new Series B 14-4 turntable also gains the Carbon fibre Wand Mat™ and silk finish carbon fibre top deck which further improves resolution and is complimentary to the above.

*The Wand 14-4 is rated Class A by Stereophile (with 12in Master Lite arm)
