PC-MT-T2-UNIVL-13A

Ultra Compact EV Portable Chargers

USER MANUAL

INTRODUCTION

Wottz EV portable chargers PC-MT-T2-UNIVL-13A are designed to charge electric vehicles equipped with Type 2 charging sockets (European standard) from any standard household outlet (Type F schuko or Type G UK). Wottz portable chargers are truly unique because all the charging station electronics is placed inside Type 2 charging plug itself!

The biggest advantage of this design is the fact that Wottz portable chargers don't have that heavy in-line "bulky box" as others do, what makes them lighter, easier to install/connect and also easier to store in a carrier case. Wottz portable chargers also offer the possibility to set desired charging current/power by simply pressing a button.

GET STARTED

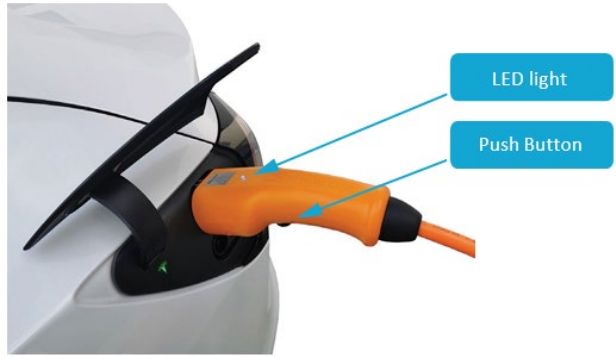
First plug the portable charger in the wall outlet and press reset on the RCD. Immediately signal LED starts blinking: number of blinks tells you what is the saved power setting (see the next page). Afterwards LED glows constantly till AC power is present indicating standby/ready status.

When you plug it into the vehicle Type 2 socket it starts blinking slowly which means the vehicle is charging. When your electric vehicle is fully charged the LED glows constantly again.

SETTING THE DESIRED CHARGING CURRENT/POWER

Wottz portable chargers allow user to set desired charging current/power, before being plugged in the electric vehicle Type 2 socket, or even while the vehicle is charging! Procedure is simple:

- press and hold the push button: LED switches off immediately
- after 5 seconds LED starts blinking slowly
- Releasing the push button after a certain number of blinks determines charging current/power as follows:



PC-MT-T2-UNIVL-13A

Number of LED blinks	Charging current/power
1	6 A / 1,4 kW
2	8 A / 1,8 kW
3	10 A / 2,3 kW
4	13 A / 3,0 kW

New charging current/power setting is stored in the memory and it stays the same (even after the power supply is not present anymore) until the next setting change is performed.

STATUS NOTIFICATION BY LED BLINKS

LED STATUS	NOTIFICATION
Slow blinking when power supply is applied	Indicating previous saved current setting
Constantly on when not plugged in	Stand-by / Ready to charge
Slow blinking when plugged in	Charging
Constantly on when plugged in	Electric vehicle fully charged

Slow blinking 2 times when plugged in	Electric vehicle requests room ventilation (no charging)
Slow blinking 3 times (plugged in or not plugged in)	Portable charger overheated (no charging); restarts charging automatically when it cools down
Slow blinking 5 times (plugged in or not plugged in)	Wall plug overheated (no charging); restarts charging automatically when it cools down; applies only to versions with wall plug integrated over-tem perature protection
Rapid blinking (plugged in or not plugged in)	Fault

In the event the cable has been damaged the product should be removed from use immediately!

TECHNICAL SPECIFICATIONS

	Type 2 (IEC 62196) Female Plug
Wall socket/grid side Standard Plug Types	Type F/E (Schuko), CEE, Type J, Type H, ...
Max. Charging Current	16A (1-phase)
Possible charging current settings	6/8/10/13/16 A
Max. Charging Power	3,7 kW (5 LED blinks)
Rated Voltage	230 Vac (1-phase)
Operating voltage/ frequency range	from 90 V to 270 V (50/60 Hz)
Wall plug integrated OVER-TEMPERATURE PROTECTION with automatic reset	no
PREMIUM quality cable	yes
Cable length	3m to 30m (or on request)
Type A ground fault protection device (RCD) 30 mA 220-250V	yes
UV resistance	yes (all parts)
Operating Ambient Air Temperature Range	from -30°C to +50°C
IP Rating	IP54 (rain water resistant)
Weight	1.6 kg (5m cable) + 0.16 kg per each additional meter of cable

WHAT IS RCD AND HOW DOES IT WORK?

RCD is an acronym for Residual Current Device - sometimes it can be called also Earth Leakage Circuit Breaker or Safety Switch. Its purpose is to prevent you from getting a fatal electric shock if you touch live part, such as a bare copper wire under high voltage. RCDs offer a level of personal protection that ordinary fuses/circuit-breakers cannot provide. RCD constantly monitors the electric current flowing through one or more circuits which it protects. If it detects electricity flowing down an unintended path, such as through a person who has touched a live part, the RCD will switch the circuit off very quickly, significantly reducing the risk of death or serious injury.

To start charging press "RESET" button on RCD.
Red indicator should become visible.

LIMITED WARRANTY

Wottz warrants its product to the original consumer purchaser that it will repair, or replace, any product that is determined to be defective for the following terms: **Two (2) years from date of purchase on all components.**

To be eligible for repair or replacement under this warranty, the product in question must be sent back to Wottz within the warranty period and the original consumer purchaser must comply with the following conditions: The product thereof must not have been modified or altered in any way by an unauthorized source; The product thereof must have been used in accordance with the user manual.

This limited warranty does not cover: Damage due to improper use; Accidental or intentional damage; Misuse, abuse, corrosion, or neglect; Product impaired by severe natural conditions, such as excessive hail storms, lightning strikes, tornados, flooding, ice or other natural occurrences; Damage due to improper packaging on return shipment.

Any and all labor charges for troubleshooting, removal or replacement of the product are not covered by this warranty and will not be honored by Wottz. All shipping costs regarding repair or replacement of the product is to be pre-paid by the original consumer purchaser.
