Test Cypionate is the popular steroid for muscle gain cycles: it produces an impressive bulking effect. Due to its use, muscles both increase in size and get fuller. Besides, Test C enhances athletic performance, which allows a consumer to exercise longer and harder. Also, its use increases sexual desire and durability. If you haven't used this compound before, a dose of 250 mg per week would be a great starting point, with optimum results coming in at around the 500 - 600mg per week mark. You should always run at least one cycle at the minimum dosage before venturing up to the higher ranges, as you may face adverse issues due to a lack of tolerance if you.

Testosterone Cypionate is one of the longest esters of testosterone, whose half-life reaches two weeks, which encourages many to put it no more than 1 time per week. In fact, the same Testosterone Enanthate can also be set once a week, but it is better to put both the steroid more often, depending on the total volume of drugs, 2-3 times a week. The bottom line is that rare injections do not.

There is a reason why pharma Testosterone Cypionate is made at only 100 mg/ml or 200 mg/ml. While Test-E is made at 250 mg/ml. Because Test-C at 250mg/ml sometimes will crash. They even have a warning on the box of pharma Test-C to heat and shake if you see crystals in it. It is normal, it does not mean you got a bad batch.
