

Welcome, I'm LightBob and it's nice to meet you!  
Pay attention and in just a few quick steps you'll have me

This is my box and these are my contents:

## Operating Instructions:

### Assembly:

1. Remove rubber cap from top of Base to expose spring.
2. Screw Body onto Base by turning clockwise. Both ends of the Body are identical so the orientation does not matter when attaching to Base. Apply gentle pressure when screwing parts together but do not force them. Doing so could cause them to cross thread and seize. Turn until tight. The threads and o-ring on the base should no longer be visible and there should be no gap between the parts.
3. Place included 3x alkaline D cell batteries into the Body with the “-“ side facing the Base and spring. The “+” side of each cell should face the top of the Body. Batteries must be inserted in the correct orientation for the light to function.
4. Once batteries are inserted, hold the Light Assembly by the knurling (see image) and turn clockwise onto tube. Apply gentle pressure against the spring loaded batteries but do not force the two parts together. Turn until tight. The threads and o-ring on the base should no longer be visible and there should be no gap between the parts.
5. *\*Note: The light may flicker or not function at all should the Base, Body, and Light Assembly not be completely screwed together.*

Base with rubber cap removed:

**SEE REVERSE SIDE FOR FURTHER INSTRUCTION**

## Use: Power On and Changing Modes

- Press button on back of light head to turn the light on. Hold for ½ second to turn off. The click of the button will be audible and tactile.
- There are 4 selectable output levels (modes): Low, Medium, High, and Turbo.
- Turbo: the light will run as bright as possible in turbo mode for 5 minutes before slowly adjusting itself down.
- When LightBob™ has been on a setting for 5 or more seconds it will record this setting to memory. Next time you turn on your LightBob™ it will default to this setting.
- Replace batteries when light is no longer bright enough for your use.
- Approximate runtime in hours: Low: 200+, Med: 150, High: 75, Turbo: 15

## Articulating Head:

- The head has greater than 180° of movement to accurately place light where you need it.
- Simply hold the light head and position as needed.

## Replacing Batteries:

- To remove batteries, hold Body and turn Light Assembly counter clockwise using the knurling for grip. Replace with only new alkaline D Cell batteries from the same lot and manufacturer. Reverse these steps while applying gentle pressure to Light Assembly when threading onto tube.

## Operating Warnings:

- **AVOID EYE INJURY** - Do not stare directly into beam or shine it directly into anyone's face. Doing so could cause retinal damage.
- **The head on LightBob™ may get warm during operation on Turbo and High settings. Caution is advised when interacting with the light.**
- **Do not attempt to unscrew. Doing so will damage LightBob™.**
- Do not operate the product with packing materials still attached. Discard and recycle packing materials, including covers and box.
- When operating the product give it at least 10 inches of free space on all sides.
- Do not place cloth, paper, bags, or other materials on any part of the product when it is in use.
- Do not mount or place near gas, flammable liquids, or any other materials that can ignite or explode.
- Use in a dry and safe location. Our products are meant for indoor and dry locations only.
- Before using LightBob™ inspect it carefully. Product can become damaged in shipping. Contact us if you have any of the following signs of a defective product: cuts or damage to electrical cord, damage to light head, or signs of damage on any part of the product.

## Battery Warnings:

**WARNINGS:** Any battery may leak harmful chemicals which may damage skin, clothing, or the inside of the light. TO AVOID RISK OF INJURY, DO NOT LET ANY MATERIAL LEAKED FROM A BATTERY COME IN CONTACT WITH EYES OR SKIN. Any battery may rupture or explode if put in a fire or otherwise exposed to excessive heat. TO AVOID RISK OF INJURY, DO NOT EXPOSE BATTERIES TO EXCESSIVE HEAT. To reduce the risk of personal injury or harm to your light, take the following precautions: • **Use only alkaline batteries from a reputable manufacturer.** • Do not use different brands of batteries in the same light. • When replacing batteries, always replace the whole set. • **Do not use rechargeable or reuseable alkaline batteries.** • Do not try to recharge batteries that are not specifically designed to be recharged. • Always install batteries with the “+” end facing the removable cap of the light and the “-” end facing the top of the light. • Do not allow children to install batteries unsupervised. • Follow battery manufacturer’s instructions as to proper handling, storage and disposal of batteries. • Do not allow children to install or tamper with the lamp. • Protect the lamp from bending or twisting. • Not recommended for use by children under thirteen years of age.
