

How to Setup Your Umbrella For Use With the beachBUB SunVisor

One-Time Setup You Should Do At Home

Remove the frame rib from each canopy pocket and place on the rubber o-ring, then the stainless rib ring, then the blue spacer. Re-insert the canopy rib into the rib pocket as shown here.

The o-ring should be positioned approximately 5" inches from the tip of the rib so that the tip will re-insert all the way into the pocket. There should be a gap between the o-ring and the blue spacer for the steel ring to sit.

Insert the adapter onto the bottom of the upper canopy pole. Insert the bolt with the washer and tighten the nut.

CAUTION: DO NOT OVER TIGHTEN

This is a one-time setup. You should do this at home before going to the beach and then you'll never have to repeat these steps again.

As the sun moves throughout the day, you will want to rotate your umbrella pole so that your SunVisor is always facing into the sun. The new adapter will convert your umbrella from 2 hitch pin holes to 4, allowing you to rotate your umbrella as the sun moves.
