

WHAT OUR CLIENTS SAY

"I have had a septic tank for 41 years and have been using Acti-Zyme for all these years. I have only had the tank pumped once in 41 years and the fellow said that the tank really **didn't need to be pumped**. Acti-Zyme has kept our **septic system problem free**. Acti-Zyme is a reasonably priced preventative maintenance for our septic system." **Dr. Don Hunt, Kaslo, B.C.**

"We have used Acti-Zyme in our two compartment septic tank for the past 38 years. Since its use our cast iron sewage pump is free of buildup. **Our sewage liners are clean**. The pump out water is clear and practically odorless. We highly recommend it's use."

Joyce & Glenn Laycock, Saltcoats, SK, Canada

Acti-Zyme's Septic Tank Treatment restores overloaded systems, reduces sludge build up, decreases excessive odours, and protects the environment.

EXPECTED RESULTS

- Liquefies Solids
- Decreases Odour
- Increases Life Span of Fields
- Increases Capacity
- Cleans Pipes and Traps
- Removes Pathogens
- Stabilizes pH

Acti-Zyme

Since 1954

**IMPORTANT: Acti-Zyme products digest soft organic matter, preferably in water. Results may vary depending upon situational variables. Dosage treatments may require more or less product in order to remove the desired level of sludge and undesirable nutrients.*

SEPTIC TANK TREATMENT

Septic tanks, Fields, RVs, & Boats

INDUSTRIAL STRENGTH

Acti-Zyme's Septic Tank Treatment is composed of a proprietary combination of aerobic, anaerobic and facultative anaerobic microbes, enzymes, nutrients and neutralizers for optimal performance.

These ingredients provide the ideal solution to managing residential wastewater and sludge buildup. Acti-Zyme products have been used in industrial and municipal systems for over 60 years with proven success.

USAGE GUIDELINES

Follow this simple step process to insure your septic system is free and clear of any sludge buildup:

1. Open the Acti-Zyme Septic Tank Container
2. Pour into the toilet the directed amount of scoops per the size of Septic Tank
3. Flush the toilet and let the Live Active Enzymes and Microbes go to work!
4. Repeat the steps above every week
5. Complete Steps 1-4 during longest period of non-use.

Suggested maintenance treatment for normal working systems is one scoop (heaping tablespoon) per week for a 1000 gallon tank. It is important to never flush harsh chemicals, and any non-organic materials down the drains. Excessive dumping of fats, oil, grease, antibiotics may require additional product. For additional guidelines see ActiZyme.com.

Recommended

"In the two weeks that I have been using your product(at the recommended initial dosage of 3 scoops per night), I have noticed NO ODOR at all coming from the tank area in our back yard! I am beyond thrilled, as this has been an ongoing issue that I thought would never be resolved. I was to the point of wanting to sell my home (which I love), with my beautiful back yard and swimming pool, to find a home that was on a sewer system! I have tried many products over the years, both chemical based and naturally based and Acti-Zyme is the ONLY product that has delivered on its promise! I will be a customer for as long as I own a home with a septic system." Sherri (Kelowna, BC)

Environmentally Safe

Acti-Zyme products are environmentally friendly and contains only non-hazardous material and non-pathogenic microbes. It will not harm pipes or fixtures in fact when used in a line or an interceptor, it will increase its activity the full length of any line not blocked by non-soft organic matter. With proper use of Acti-Zyme it will keep lines and drain fields open and working effectively, avoiding potential back ups and polluting above and underground water.
