Basic colors for boats

These basic colors are always available.

Different colors may be available on request.

The price of the boat includes a simple combination of up to two colors without the use of the stencil foil. If you wish to have a custom color design, please send us an image of your design using the stencil above. We will let you know whether it can be produced and what the extra charge would be.

NOTE: Colors can look different depending on what type of monitor, phone, or tablet is being used since the setup of each screen is different, and the same can be said for prints of the PDF and the type of printer used.

Color shade variations

Please note that these pigments will appear darker on boats that have a carbon fiber or carbon/aramid outer layer (This includes the Carbolight, Profi, and Flexible layups). The exact color shade is only possible to achieve if it is applied over a white base color, and this **extra base layer will make the boat heavier.**
