PROFESSIONAL USE ONLY

CARBOXY THERAPY

Carbon Dioxide (CO₂) penetrates the skin, enhancing oxygen production by stimulating blood circulation. This method supports cell metabolism and promotes new collagen formation. Oxygen presence on the skin boosts collagen production, combats acne-causing bacteria, and activates fibroblasts.

During Carboxy CO₂ therapy, skin oxygenation leverages scientific processes. But how does CO₂ create the Bohr effect? The CO₂ gel reacts with a Citrix-based mask, generating small amounts of carbon dioxide on the skin. This increases capillary blood flow, releasing oxygen from haemoglobin in red blood cells. Consequently, the treatment area receives more oxygen, enhancing the skin's absorption of active ingredients.

Carboxy CO₂ therapy complements mesotherapy and other facial treatments. It restores blood circulation in capillaries, leading to increased oxygen release from hemoglobin, stimulating collagen production, and restoring the epidermis' moisture balance. By optimizing skin oxygenation, Carboxy CO₂ therapy revitalizes and rejuvenates the skin.

Oxygenation revitalizes the skin using natural oxygen molecules and triggering the Bohr effect. It promotes a youthful and healthy appearance, enhancing blood flow and natural metabolic processes. The skin experiences immediate and long-lasting smoothness and revitalization, with elevated oxygen levels.

Carboxy Therapy treatment excels at boosting oxygen production beneath the skin, essential for maintaining healthy, radiant skin by aiding cell regeneration and collagen production. By increasing oxygen levels, CO₂ Carboxy Therapy effectively reduces fine lines and wrinkles, resulting in plumper, more youthful-looking skin. This therapy also targets hyperpigmentation and discoloration. The CO₂ generated during the treatment helps even out skin tone and reduce dark spots, leading to a brighter and more uniform complexion.

Additionally, CO₂ Carboxy Therapy significantly improves skin texture and firmness. The combination of gel and sheet mask stimulates collagen production, enhancing skin elasticity and firmness. Increased oxygen levels and improved blood circulation help reduce inflammation and regulate sebum production, promoting clearer, healthier-looking skin. The CO₂ aids in unclogging pores and removing impurities, leaving the skin clean and refreshed.

Benefits:

Lifting - Enhances metabolism and promotes protein synthesis, supporting overall vitality.

Brightening - Improves skin tone brightness through enhanced blood circulation, effectively reducing dark under-eye circles.

Pore Management - Essential for maintaining clean, refined pores. Carboxy therapy eliminates waste and toxins, resulting in a more contracted and polished appearance.

Swelling and Bruising - Provides relief from swelling and bruising associated with cosmetic or surgical procedures, alleviating discomfort efficiently.

Exfoliation - Dissolves impurities and removes dead skin cells, leaving your skin exceptionally soft and clean.

Contraindications: This product may be unsuitable for those with dermatitis, severe rosacea, sunburn, or allergies to any ingredients. Consult a healthcare professional or perform a patch test before use, especially if you have specific skin concerns. Avoid use if you have blood clotting disorders, open wounds, skin cancer, or sensitivity to reactive products like carbonation.

While Carboxy CO₂ treatments are particularly effective for acne, it is recommended to avoid using them 2-3 days before or after other acne treatments like peels.

Directions for Use:

1. Cleanse and exfoliate your face. We recommend using Gentle Milk Cleanser for normal to dry skin, and Antibac Milk Cleanser for oily or acne-prone skin.
2. Apply the Carboxy Gel generously.
3. Place the mask on top of the gel and press to activate carbonation. Continue pressing until you hear the sizzle subside, ensuring full activation across your face and neck.
4. Apply additional gel on top of the mask to activate any remaining dry areas and thoroughly soak the mask in gel.
5. Cover the mask with plastic wrap or facial covers to prevent the gel from drying out. Leave it on for 20 minutes.
6. Remove the plastic cover and mask, then gently wipe off any excess gel with a damp sponge. Note that skin redness is completely normal due to increased blood circulation in the treated area.

This treatment may be incorporated with other treatments excluding skin peels.

In just one session, clients can experience a brighter, tighter, and slightly slimmer face. Some stinging during the procedure is expected, especially for those with sensitive skin. This sensation is brief and normal, caused by the penetration of CO₂. Redness may occur and is completely normal.

It is recommended for first-time users to undergo four sessions, spaced one week apart. Maintenance can be tailored to the client's needs and skin condition.

Suitable for pregnant and breast feeding women.

PD-13 THERAPY

PD-13 THERAPY revolutionizes acne treatment by offering a safe and effective alternative to traditional methods. Utilizing the power of light therapy, which is highly beneficial for various skin conditions, PD-13 THERAPY delivers targeted treatment with impressive results.

With PD-13 THERAPY, expect a reduction in sebum production and bacterial growth, leading to clearer skin and fewer breakouts. This painless, non-invasive treatment is suitable for all skin types and requires no downtime, making it ideal for busy professionals who can't afford the side effects of other acne treatments.

Moreover, PD-13 THERAPY is versatile enough to treat Rosacea, reducing redness and inflammation for calmer, healthier-looking skin. It's an excellent choice for individuals with sensitive skin or those prone to redness and irritation.

So, how does PD-13 THERAPY work? It begins with Methyl Aminolevulinate HCl, a photosensitizing agent targeting the sebaceous glands. When exposed to Red Photo Light Therapy, this active ingredient produces oxygen that destroys acne-causing bacteria and reduces oil production, thereby decreasing breakouts and promoting overall skin health.

Beyond its effectiveness, PD-13 THERAPY boasts a superior safety profile. Unlike many acne treatments with potential side effects, this innovative therapy is extensively tested and safe for long-term use. Free from harsh chemicals or irritants, it is gentle on the skin, ensuring a comfortable treatment experience.

Combining Methyl Amino Levulinate HCl (MAL) with red light therapy provides an effective solution for acne, actinic keratosis, and the prevention of acne recurrence. As a photosensitizer, MAL deeply penetrates the skin when activated by specific light wavelengths, promoting skin lesion recovery, growth, and combating sun and photo damage. This treatment is suitable for the face, scalp, and body.

How does it work?

MAL enhances the effects of red light therapy by acting as a photosensitizer. Upon exposure to red light, MAL is converted into a compound called protoporphyrin IX (PpIX). PpIX, in turn, induces cell damage in the presence of oxygen.

Effective treatment for Acne

Acne, a common skin condition, results from inflamed or infected sebaceous glands and is often difficult to treat. Traditional treatments can cause side effects like dryness and irritation. The combination of MAL with red light therapy offers a gentler alternative that targets acne-causing bacteria without harming the surrounding skin.

Directions for Use:

1. Cleanse and Exfoliate: Use Krx Aesthetics AntiBac Milk Cleanser with a Krx Biocellulose sponge for exfoliation.
2. Extraction (Optional): Apply Krx Pre Extraction Mask.
3. Remove Residue: Ensure all product residue is removed.
4. Apply Solution: Apply 1ml of Pd-13 Therapy solution to the affected area. Cover lightly with a towel, turn off all lights, keep the skin away from light for 20 minutes.
5. Dab Residue: Use a dry cotton pad to remove excess solution, then place under Red LED Light for 20 minutes (or as directed by your light provider).
6. Neutralize: Apply Pd-13 Neutralizer with a cotton pad and leave on the skin for 2-3 minutes.
7. Rinse: Remove the neutralizer with water.
8. Soothe: Use Krx Biocellulose Mask or Face Gelee Mask to calm and soothe the skin.
9. Moisturize and Protect: Apply 1-2 sachets of repair cream, followed by sunblock.

What to Expect:

- Skin shedding may occur depending on the severity of your skin condition.
- Redness and stinging are normal and should subside within 2-3 days after treatment. Using KRX Repair cream may help.
- Moderate to severe skin dryness is a common reaction.

What to Avoid:

- Sun exposure and light-activated treatments, including laser procedures, for at least 7 days
- Daily application of sunscreen is essential
- Avoid saunas, swimming, and strenuous activities that cause excessive sweating
- Refrain from scrubbing, peeling, exfoliating, or using acidic products for a minimum of 7 days

Treatment Intervals:

- Schedule treatments every 6-8 weeks, adjusting based on the severity of skin condition
- Significant skin improvement is usually visible 3-4 weeks after the procedure
- Ongoing treatments enhance skin health by correcting skin gland function

Contraindications:

- Autoimmune disorders
- Diabetes
- Pregnancy and breastfeeding
- Skin cancer
- Photosensitivity
- Allergies to listed ingredients
- Known sensitivity to Methyl Amino Levulinate (including peanut and almond oil)

INFLACURE HEALING ACTIVE

Inflacure offers a powerful healing treatment featuring Urea and Chlorophyll, combined with soothing botanical root extracts and peptides. This blend works to swiftly and effectively heal inflamed and irritated skin. It purifies, prevents bacterial growth, and calms common skin irritations such as eczema, rosacea, dermatitis, psoriasis, and burns.

The product is available in 2ml syringes, with five syringes per box. It can be used for nano infusion treatments, masks, with facial tools, ultrasound, and Red Light Therapy.

CHLOROPHYLL

Chlorophyllin is a versatile ingredient beneficial both topically and as a supplement. It primarily targets inflammation, eliminates bacterial growth, heals minor infections, and purifies the skin (and body when ingested). Rich in Vitamin C, A, and E, it provides numerous skin benefits.

UREA

Urea is widely used to soften and deeply moisturize dry, thick, and flaky skin due to its high water-binding ability. It is effective in keeping the skin fully hydrated, which aids in soothing irritated and inflamed skin. As a non-irritant, it also acts as a penetration enhancer, improving the efficacy of other skincare ingredients.

BOTANICAL EXTRACTS & PEPTIDES

This formulation includes a combination of healing, antibacterial, and anti-inflammatory fruit, root, and leaf extracts, along with multi-peptides. These ingredients work together to help the skin recover from inflammation and irritation rapidly.

Directions for Use:

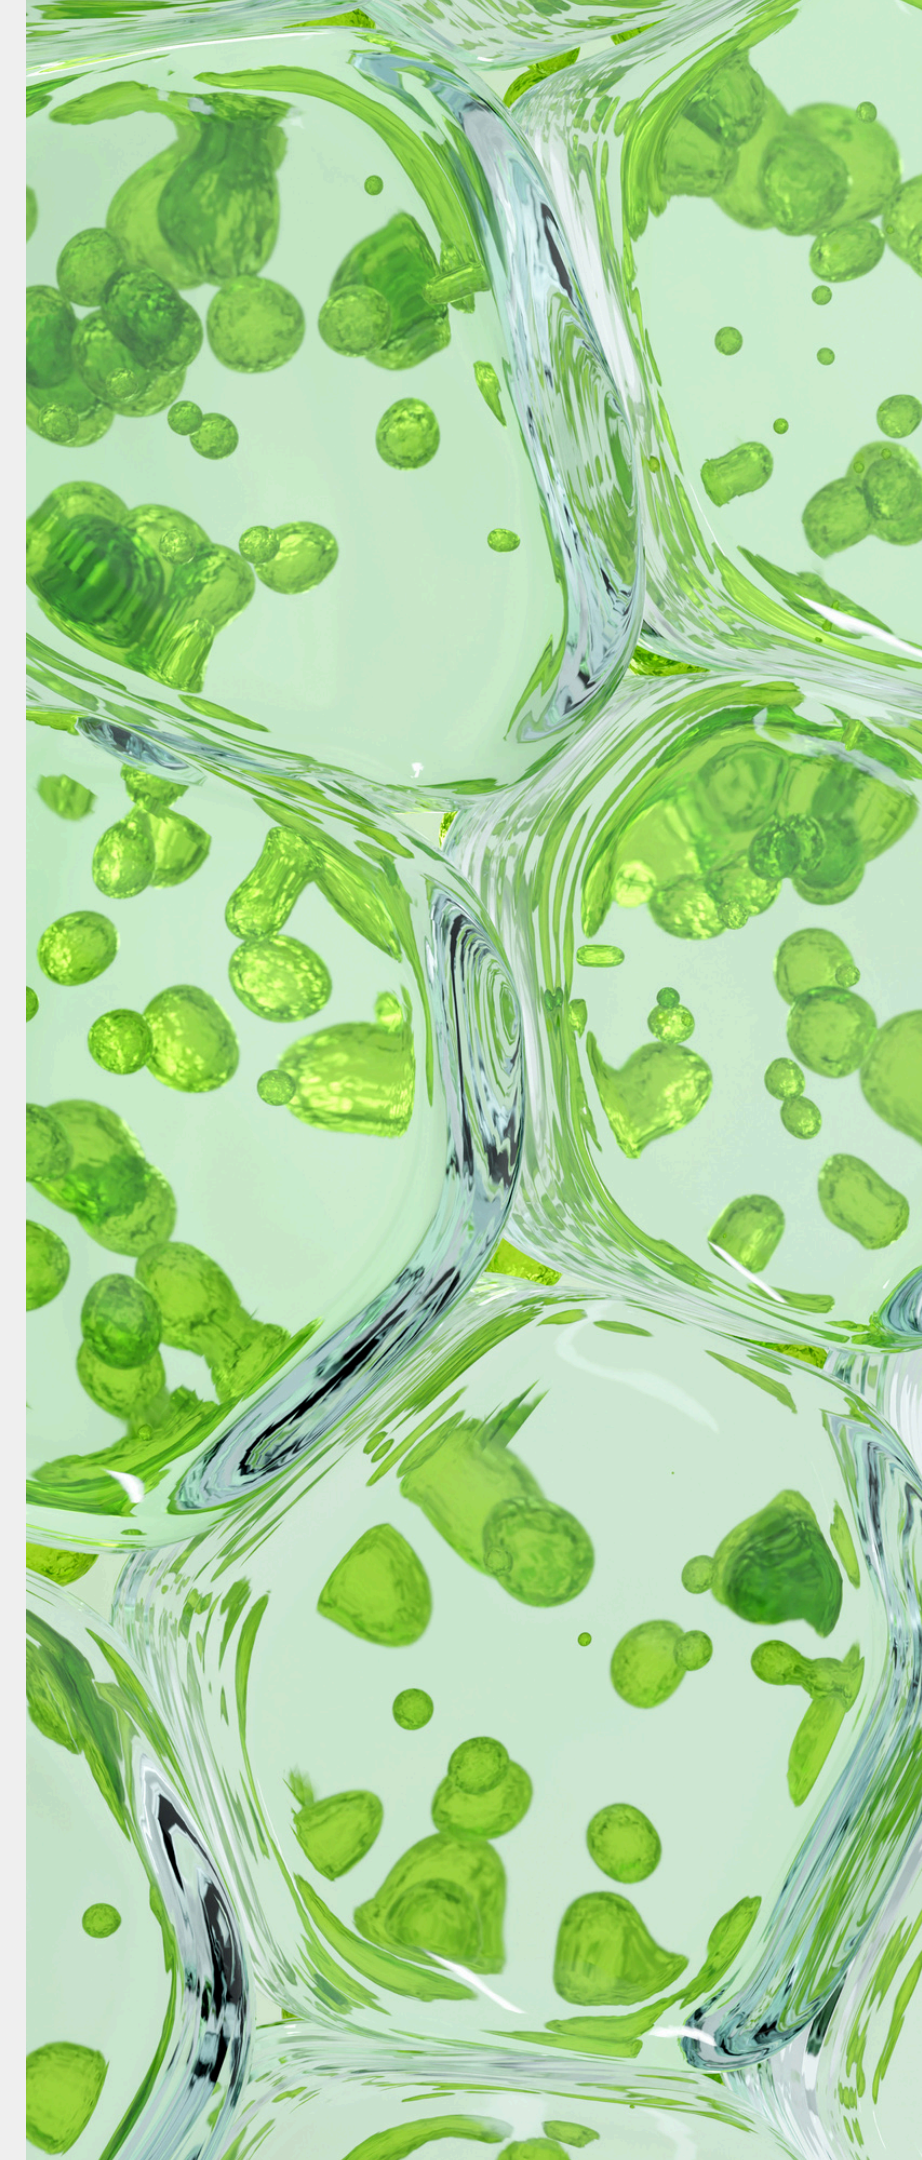

- Apply one ampoule evenly to the face.
- Use facial tools and leave on for 10 minutes.
- If using Red Light Therapy, remove simultaneously with the Red Light.
- Wipe off and remove all residue.
- Apply Repair Cream and Sunblock.
- Use once every 10 days for four sessions, then once a month for maintenance.

Target Concerns:

1. Rosacea and skin redness
2. Eczema and skin dryness
3. Damaged skin barrier
4. Irritated and sensitized skin

Contraindications:

1. Allergy to listed ingredients
2. Open wounds
3. Immunocompromised individuals
4. Ultra sensitivity to sun

V-TOX MASK

The V-Tox Higher Power Lift Mask delivers an intense lifting, tightening, and firming effect, visibly rejuvenating and enhancing the skin's appearance quickly. What sets our V-Tox Mask apart is its transformative action during application.

As the mask dries, it produces a tightening and firming sensation that transitions into a "cracked" effect. This unique sensation and appearance occur due to water evaporation while the skin absorbs essential nutrients.

The mask also reveals underlying skin issues through its drying pattern:

- Smooth: Indicates normal skin.
- Bubbly/Bumpy: Signifies a lack of collagen, leading to sagging and wrinkles.
- Dry/Cracking: Suggests dehydration.

V Tox should be used once a week for 4 weeks, followed by maintenance applications every 15 to 30 days.

Aftercare:

V-Tox is a non-invasive treatment, often incorporated into facials and other skincare routines. When used alone, no special aftercare is required, allowing clients to immediately return to their regular skincare regimen.

However, if V-Tox is combined with other facial treatments such as Radio Frequency or Nano Infusions, it is recommended to adhere to the aftercare guidelines specific to those treatments.

Active Ingredients Breakdown:

- **Coccinia Indica Fruit Extract:** Protects the skin barrier and helps balance the skin's surface biome.
- **Eclipta Prostrata Extract:** Calms the skin and provides antioxidant benefits.
- **Niacinamide:** Reduces irritation, enhances hydration, and soothes skin redness.
- **Adenosine:** Reduces the appearance of wrinkles and strengthens the skin.
- **Aloe Barbadensis Leaf Extract:** Moisturizes and soothes the skin.
- **Rosmarinus Officinalis (Rosemary) Extract:** Reduces puffiness.
- **Lavandula Angustifolia (Lavender) Extract:** Soothes, calms, and helps with acne.
- **Thymus Vulgaris (Thyme) Extract:** Stimulates blood flow.
- **Origanum Vulgare Flower/Leaf/Stem Extract:** Acts as an antioxidant and reduces skin stress.
- **Hippophae Rhamnoides Extract:** Provides anti-aging and skin healing benefits.
- **Atelocollagen (Cow) & Desamido Collagen (Vegan):** Both provide collagen, enhance elastin strength, and promote a lifting, tightening, and youthful appearance.
- **Bioflavonoids:** Maximize vitamin C benefits on the skin and act as powerful antioxidants to reduce skin stress.
- **Hydrolyzed Collagen:** Increases skin hydration, elasticity, and firmness.
- **Thamnia Vermicularis Leaf Extract:** A powerful botanical extract for anti-aging.
- **Soluble Collagen & Collagen:** Deeply nourish and moisturize the skin to support the collagen structure for a youthful appearance.
- **Opuntia Ficus-Indica Fruit Extract:** Acts as an antioxidant and helps the skin combat environmental damage.
- **Brassica Oleracea Italica (Broccoli) Extract:** Rich in oleic, linoleic, erucic, and alpha-linoleic acids, promoting Omegas 3, 6, and 9 for overall skin health.
- **Collagen Amino Acids:** Help retain nutrients and moisture in the skin.
- **Procollagen:** Provides structural support to maintain skin shape and enhances its ability to retain moisture.
- **Peptides (Palmitoyl Pentapeptide-4, Palmitoyl Tetrapeptide-7, Palmitoyl Tripeptide-1, Palmitoyl Tripeptide-5, Nona Peptide-1, Copper Tripeptide-1, Hexapeptide-9, Tripeptide-1, Acetyl Tetrapeptide-2):** Reduce the appearance of fine lines and wrinkles, improve wrinkle depth, and support skin against sagging.
- **Acetyl Hexapeptide-8 (Argireline):** Synthetically similar to a protein found in Botox, it reduces the appearance of fine lines and wrinkles.

GREEN SEA PEEL

Green Sea Peel is a 100% chemical-free peel, crafted entirely from natural sea-derived ingredients. This innovative product offers an alternative to traditional chemical peels, consisting of a powder and an activator. When combined, they create a peel that stimulates the skin similarly to microneedling, effectively removing the top, damaged layers. Unlike chemical peels that depend on pH and acidity, Green Sea Peel works by stimulating cells, detoxifying old skin cells, and regenerating new ones.

The activator contains Hyaluronic Acid, Glucan, and Allantoin, which effectively treat the skin, while marine actives ensure optimal results. The activator's ingredients include Aqua, Glycerine, Betaine, Glucan, Sodium Hyaluronate, Allantoin, and Propylene Glycol. The powder is composed of Durvillea Antarctica Extract, Hydrolyzed Sea Sponge, and Algae Extract. With over 4 million natural bio microneedles, these ingredients target various skin issues, with Hydrolyzed Sea Sponge, also known as spicules or bio-needles, playing a crucial role in the peeling process. Other ingredients enhance and boost the peel's effectiveness.

While it is a natural product, individual responses may vary. Always refer to before-and-after photos for accurate expectations. If discomfort occurs, a cold compress can soothe the skin.

Contraindications include allergies to the ingredients or seafood, eczema, psoriasis, skin cancer, autoimmune issues, fungal skin diseases, diabetes, pregnancy, and active burns or wounds.

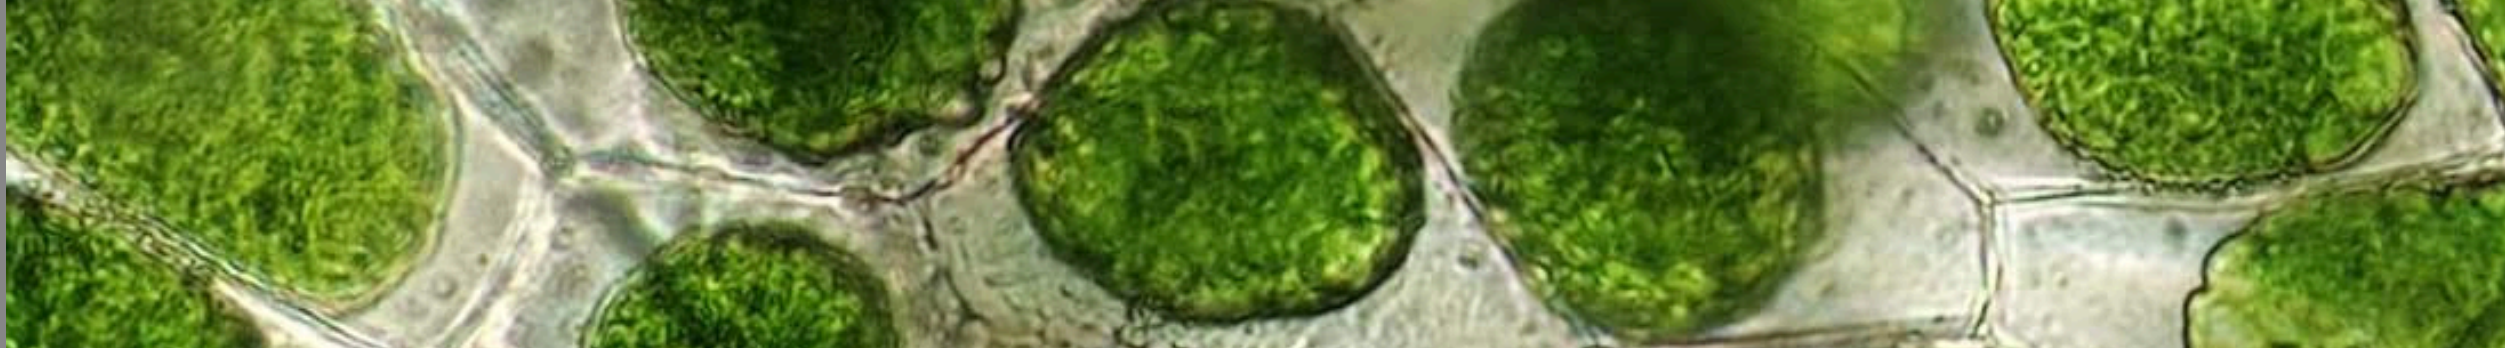

INTERVALS:

Each treatment should be administered every 14 days for the first four sessions (assess the skin first and extend the interval if the skin is sensitive). For subsequent treatments, wait at least 60 days before proceeding with the fifth session.

SUITABLE FOR:

- All skin types and tones
- Active acne and acne scarring
- Skin discoloration
- Enlarged pores and uneven texture
- Aging and mature skin
- Fine lines and wrinkles
- Dullness and lack of radiance

AFTERCARE:

- DO NOT wash skin for 24 hours
- use only KRX Gentle Milk Enzyme cleanser after 24 hours
- If skin feels itchy apply REPAIR CREAM (avoid if not necessary)
- DO NOT use any acidic or exfoliating products for 14 days
- NO swimming or sauna for 14 days.
- NO excessive sweating for 7 days.
- If skin peels, DO NOT pull the skin let it shed off naturally - pulling the skin may cause post inflammatory hyperpigmentation - discolouration.
- Avoid going out in the sun - if this cannot be avoided wear a hat and apply KRX Sunblocker 50+

WHAT TO EXPECT:

- Redness and a sensation akin to sunburn for up to four days
- A sandy, needle-like feeling
- Stinging and a hot sensation
- Skin shedding and peeling
- Itchiness
- Slight swelling
- Pain during application and removal, which is normal

SKIN PREPARATION

For maximum results please advise your client that it is best for the 7 days prior to the procedure to:

- use only either KRX Gentle Milk Enzyme cleanser (dry skin type)
- OR KRX Gel cleanser (oily skin type)
- Refrain from using any serums, oils or moisturisers for a minimum of 7 days
- During your initial consult with your client you must advise your client of the approx. 7 day down time of the procedure -

Guide only and will vary from client to client:

day 1 - skin sensitivity - redness

day 2 - skin sensitivity - redness

day 3 - peeling and itching may start

day 4/5 - peeling intensifies

day 6/7 - peeling will start to stop

PROTOCOL

1. Perform a double cleanse using a mild skin cleanser.
2. Mix the Green Sea Peel solution (combine the full ampoule of powder with the activator).
3. Vigorously massage the mixture into the skin in circular motions for 5 minutes, then press and massage again for an additional minute.
4. Leave the mixture on for 20 minutes.
5. Dampen the skin with water and massage for 3 more minutes.
6. Thoroughly wash off the mixture.

NOTE: While GSP cannot burn a client, adverse side effects such as blistering and oozing pus can occur, particularly between treatments. These symptoms typically subside within a few days.

LAZER PEEL

Lazer Peel is a revolutionary skincare innovation that combines active acids with Tranexamic Acid to deliver superficial to medium-depth exfoliation and skin whitening, offering results comparable to laser treatments.

Recommended for:

- Darkened skin
- Age spots
- Dark spots
- Freckles
- Uneven skin tone

What makes Lazer Peel stand out?

Lazer Peel blends multiple acids at a pH level of 1.7, mimicking the effects of whitening laser treatments. This innovative formula includes Glycolic, Lactic, and Salicylic Acid, infused with Tranexamic Acid, vitamins, and botanical extracts

Due to the nature of this product, a professional skin assessment is required to determine suitability for the peel and to provide guidance throughout the healing process. Improper use and inadequate aftercare of chemical peels can result in skin damage. This product is strictly for professional use only. The high acid concentration and low pH levels may alter the product's colour and smell; this is normal and completely safe for use.

Key Ingredients:

- Glycolic Acid (34.3%): Resurfaces the upper skin layers by loosening dead skin cell bonds, enhancing skincare absorption, and revealing a glowing, smoother, and plumper complexion.
- Citric Acid: Enhances the efficacy of Glycolic Acid, ensuring a safer chemical peel with better recovery. Often combined with BHAs for anti-acne benefits.
- Lactic Acid (10%): Targets the damaged outermost skin layer, aids in deeper peel penetration, and delivers a quick, glowing, "Korean glass skin" effect.
- Salicylic Acid: Comedolytic, desmolytic, and anti-inflammatory properties help manage oil buildup and acne.
- Hexylresorcinol: A safe alternative to hydroquinone, found naturally in wheat and rye, it works up to five times better than hydroquinone for skin whitening and provides an even, healthy skin tone.

Why Tranexamic Acid?

Unlike typical chemical peels, Tranexamic Acid blocks melanin production and dissolves existing melanin, accelerating whitening results when combined with Glycolic Acid. It doesn't cause skin shedding, making it a unique component in this formula, replacing the commonly used Kojic Acid, which can cause contact dermatitis.

What to Expect After the Peel:

- Immediate glow effect with possible redness.
- First few days: You might experience dryness, irritation, and mild swelling.
- Three to five days: If peeling occurs, you may notice breakouts or a tan/darker appearance.
- Downtime should subside within 6-7 days.
- If skin unevenness occurs, it may last up to 15 days but will eventually even out.
- Results vary; some may experience shedding while others may not. ***Absence of skin shedding does not mean the peel was ineffective. Check your skin's condition 7 days post-peel for before-and-after comparison.

Contraindications:

- Allergy to any listed ingredients
- Sensitivity to acids
- Autoimmune disease
- Skin wounds
- Diabetes
- Current use of Hydroquinone, Tretinoin, or similar medications
- Active bacterial, viral, fungal, or herpetic infections
- History of drugs with photosensitizing potential
- Preexisting inflammatory dermatoses (e.g., psoriasis, atopic dermatitis, pemphigus)
- Facial cancers, particularly facial melanoma

Usage Instructions:

1. Prepare the Skin:

- Cleanse with Pre-Peel Cleanser.
- Tone with Pre-Peel Toner.

2. Protect Sensitive Areas:

- Apply Vaseline to the lip line and corners of the eyes.

3. Apply LaZer Peel:

- Apply a thin layer of the peel evenly on the face, avoiding lips and eyes.
- Follow recommended layers and leave-on time

4. Manage Sensation:

- If burning occurs, use a cold cloth or fan to ease discomfort.
- If unbearable, wash off immediately with water and neutralize.

5. Post-Peel Care:

- Rinse face thoroughly with water.
- Tone with Post-Peel Toner.
- Soothe with Biocellulose Mask or Face Gelee.
- Apply Repair Cream.
- Finish with Sunblock.

Recommendations:

- Gradually increase LaZer Peel application with each use based on the client's experience and tolerance.
- Initially, leave on the skin for 2-3 minutes. For more experienced users, 3-5 minutes is permissible, but proceed with caution to avoid irritation.

Peel Layer Guidelines:

- Sensitive Skin: 1-2 layers
- Normal Skin: 3-4 layers
- Oily Skin: 4-5 layers

Aftercare Instructions:

- Refrain from washing your face for at least 6-8 hours post-procedure.
- We recommend using our Cica Recovery Line or repair cream during the healing period.
- If your skin begins to shed, avoid picking, scrubbing, pulling, or tugging at it.
- Applying SPF 50+ is strongly advised.
- Abstain from using any harsh products, including chemical peels or acids, for a minimum of 7-10 days.

Lazer peel treatments are recommended to be conducted in 4-6 sessions, with gradually increasing application times and intervals of at least 4-6 weeks. Once optimal results are achieved, maintenance sessions every 4-6 months are suggested. If satisfactory results are evident after just one or more sessions, the client can proceed directly to the maintenance schedule.

R3 THERAPEEL

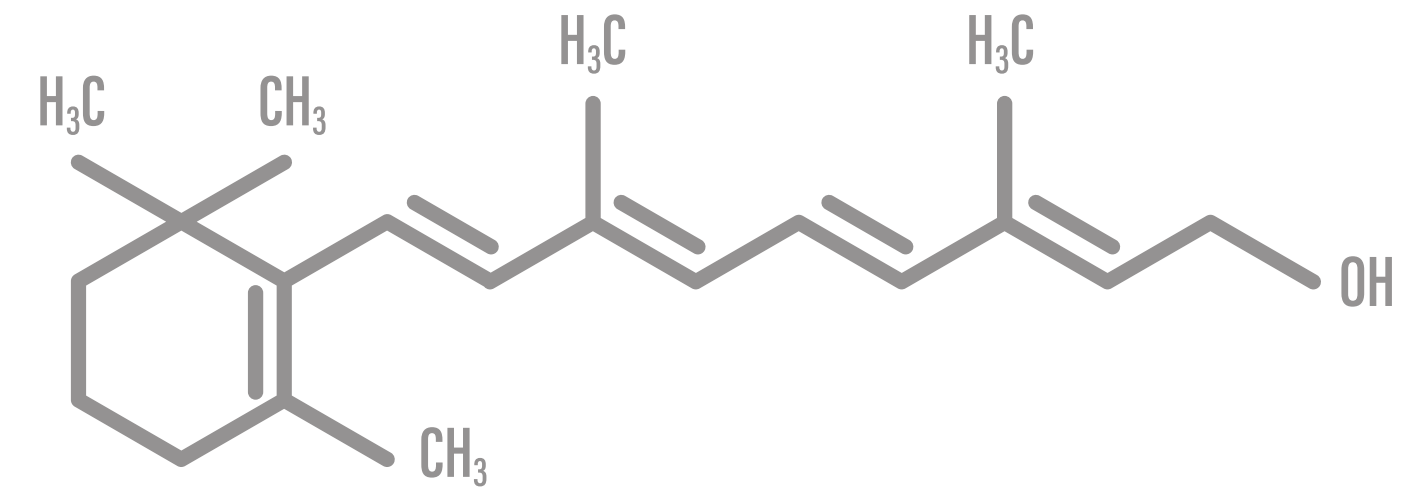

R-3 Therapeel is a specialized acid peel containing 3% Retinol, designed to treat thinning skin, wrinkles, and fine lines. It enhances collagen and elastin production for a youthful appearance, minimizes pores, strengthens the skin, removes dead cells, and improves texture, making the skin vibrant and youthful.

Recommended for:

- Enlarged pores
- sun-damaged skin
- sagging skin
- fine lines
- wrinkles
- dullness
- textured skin

Benefits of Retinol:

Retinol, a form of Vitamin A, targets a specific range of skin issues but penetrates deeper than other peels due to its small molecular size. It offers a unique form of exfoliation, working with cellular turnover to thicken skin, promote healing, and enhance collagen production. Classified as a strong chemical peel, its deep penetration can cause breakouts if overused.

Formulation:

The peel combines 6 botanical extracts, Hyaluronic Acid, and 3% Retinol with an average pH level of 1.8. This minimal downtime peel is perfect for those seeking to reduce wrinkles and fine lines while promoting healthier, thicker skin to prevent early signs of aging.

Directions for Use:

1. Prep skin according to peel protocol.
2. Apply 2 layers of R-3 Therapeel at 5-minute intervals.
 - Check for irritation or reactions after the first layer.
3. Leave on for 6 hours.
 - If the client experiences unbearable itching or sensitivity, wash off immediately.
4. Rinse off with water.
5. Apply repair cream.
6. Apply sunscreen if necessary.

Caution:

Do **not** mix or use with:

- Other Vitamin A products
- Vitamin C
- Benzoyl Peroxide
- AHA/BHA

Combining these ingredients may cause irritation and extreme dryness.

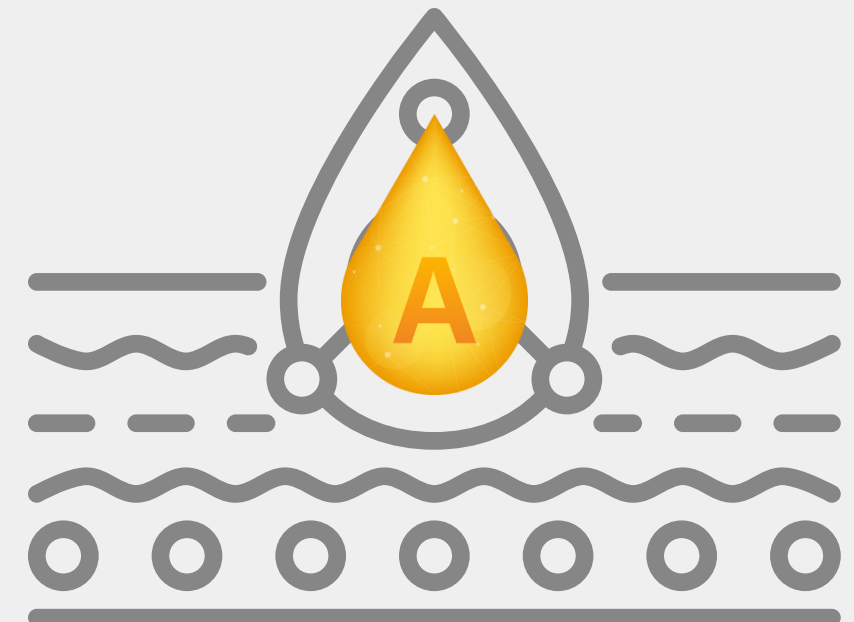

Pre-Use Advisory:

Discontinue the following at least 3 days before using R-3 Therapeel:

- Astringents
- Toners
- Shaving products
- Medicated soaps
- Products containing sulphur
- AHA/BHA

Side Effects:

- Purging/small breakouts lasting a few days
- Redness, stinging, or itching
- Micro shedding

KRX CELLULAR PEELS

Krx Aesthetics peels should not be used on clients with immune deficiencies, active warts, open wounds, sores, sunburns, dermatitis, or skin cancer in the treatment area. Additionally, clients with a history of chemical peel allergies or skin reactions should avoid these peels. They are also unsuitable for individuals who have undergone chemotherapy or radiation therapy within the past year, as well as for pregnant or breastfeeding women.

Medical professionals and aestheticians must provide their own waivers to clients. Krx Aesthetics is not responsible for any skin damage resulting from misuse, abuse, or improper application of the products.

Please note that the number of layers and the duration of application can affect the results of a chemical peel.

- More layers = Stronger
- Longer duration = Stronger
- Fewer layers = Milder
- Shorter duration = Milder
-

The directions provided in our protocol, label, and packaging are based on the safest tests we conducted. However, they may be adjusted according to professional judgement, individual pH levels, and percentage knowledge. Exercise caution when performing the procedure. KRX AESTHETICS chemical peels with the same pH level can often be combined to create a customized peel.

BLUE PEEL

Blue Peel is a potent 10-minute chemical exfoliating facial solution featuring Glycolic Acid, Lactic Acid, Tartaric Acid, Citric Acid, and Salicylic Acid. It effectively exfoliates and primes the skin for various facial procedures. Suitable for weekly use.

COMPOUND: AHA & BHA

Recommended for: Dry, dull, and congested skin.

Tip: Use as an exfoliator before treatments like hydrfacial, oxygen facial, or mesotherapy for enhanced product absorption.

CLEAR PEEL

30% Salicylic Acid Peel (pH 2.9) - This advanced professional peeling gel is specifically formulated for acne-prone and breakout-prone skin. Its potent blend targets bacteria, blemishes, and dark spots, effectively clearing pores, unclogging follicles, regulating excess sebum, and minimizing acne marks. It also removes blackheads, soothes inflamed skin, and reduces fine lines, particularly around the lips.

For professional use only. A neutralizer is required to deactivate this product. Failure to neutralize the skin may result in severe burns.

COMPOUND: BHA

RECOMMENDED FOR:

- Acne-prone skin
- Oily skin
- Combination skin
- Clogged pores
- Blemished skin

BRIGHTENING PEEL

40% Lactic Acid Peel, pH 2.9 - This peel is renowned for its ability to effectively brighten and lighten skin tone, refine pores, and smooth fine lines. Its larger molecular structure makes it suitable for sensitive skin, removing dead skin cells and enhancing skin elasticity.

Professional Use Only: This product must be used with a neutraliser to halt its action. Failure to neutralise the skin can result in severe burns.

COMPOUND: AHA

RECOMMENDED FOR:

- Sensitive skin
- uneven skin tone
- dark spots
- age spots
- fine lines.

GLOW PEEL

40% Glycolic Acid Peel (pH 2.9) - Promotes cell renewal, leaving the skin hydrated, radiant, smooth, and glowing. This peel also addresses expression lines, photoaging, and uneven skin tone. Its small molecular weight allows it to penetrate deeper skin layers, effectively removing dead skin cells and debris for a fresh, revitalized complexion. Suitable for all skin types.

For professional use only. A neutralizer is required to stop the peel's action; failure to neutralize can result in severe burns.

COMPOUND: AHA

RECOMMENDED FOR:

- Dull
- dry skin
- photoaging
- uneven skin tone
- superficial acne scarring (spots).

THREADFILL AMPOULE

ThreadFill Ampoule is a revolutionary concept combining a potent ampoule with absorbable, water-soluble micro-collagen threads. This blend effectively treats and reduces the appearance of wrinkles, fine lines, and sagging skin caused by decreased collagen production.

The threads, cut into smaller pieces, contain 1000PPM of collagen, peptides, and minerals, designed in an easy-to-absorb rope-like structure. These threads are pre-dissolved and mixed into the water or serum portion of the ampoule, providing collagen in two different forms. Without the serum, the threads alone contain numerous actives that strengthen, hydrate, and enhance skin elasticity. These threads are up to three times thicker than typical cosmetic collagen threads, allowing them to dissolve slowly for maximum absorption.

Collagen in rope/thread structures is not new and has been used in the medical field for years as wound dressings to accelerate healing. The collagen in these dressings recruits healthy cells, triggering fibroblast production to heal wounds and minimize scarring. This collagen healing comes in various forms, such as pads, sheets, gels, and powders. In the beauty industry, we have adapted this collagen treatment concept by utilizing collagen threads combined with a potent ampoule mixture for enhanced results. Not all collagen ropes are equal; factors such as durability, collagen type, and material quality vary.

Our Threadfill Ampoule with micro-collagens is absorbed through the skin in different layers, providing effects ranging from an instant lift to long-term treatment. The primary goal is to deliver ample micro-collagen to affected facial areas, boosting absorption and eliciting a positive treatment response, significantly reducing wrinkles and fine lines while lifting the skin.

As we age, our skin requires more collagen, and this is where the serum in the ampoule excels. It is packed with age-defying ingredients such as Niacinamide, various molecular weights of Hyaluronic Acid, fruit extracts, Tranexamic Acid, and peptides, along with pre-dissolved collagen threads in the serum.

Thread fill ampoules can be used with:

- Nano needling
- Micro needling
- Ultrasound,
- Ultrasonic therapy
- Micro current machines
- Manual facial massager tools
- Ultrasonic devices.

The key to maximizing skin absorption is to choose the right tools that enhance this process. Different machines work in various ways, so it's important to find what suits you best. Threadfill ampoule contains micro molecular ingredients that can be easily absorbed even without machines or tools. However, to see the best, most satisfactory, and amazing results, we recommend using methods that help the skin absorb the product more effectively. Your clients will be proud of the outcome.

For microneedling, we recommend using a stamping motion and a maximum depth of 1mm (nano needle) or 0.25mm (microneedle). Patients should not bleed or experience pain, as the primary goal of microneedling is to aid product absorption, not to create micro tears.

When using tools like microcurrent devices, ultrasonic therapy, ultrasound, or manual face massagers, simply follow the wrinkles until the product is fully absorbed.

Using the Threadfill ampoule with manual facial massage

The Threadfill ampoule can be safely used as a regular treatment, up to once a week, similar to a sheet mask routine. The frequency of use ultimately depends on the client's preference, as it can be applied as often as once a week without any side effects. When combined with other procedures, please refer to the specific session requirements of those treatments.

For more practical and easier in-salon services for clients who cannot come frequently:

- If used alone, it can be applied once a week for the first four weeks. Then, gradually reduce the frequency to twice a month and eventually to once a month for ongoing maintenance.
- If combined with other treatments, follow the frequency requirements of the other treatments and adjust the use of the Threadfill ampoule accordingly.

Please note:

- Results may vary between individuals.
- Deeper wrinkles might require more sessions compared to fine lines.
- Instant effects can last up to 12 weeks, potentially longer if combined with other treatments like Threadlift Ampoule.
- Proper aftercare/home care is essential.
- Individual lifestyle choices (smoking, drinking, etc.) matter.
- Permanent results depend on diligent aftercare, treatment consistency, and a healthy lifestyle.

HA-FILLER

Composed entirely of hyaluronic acid (HA), our HA Filling Powder is unlike injectable fillers, featuring three molecular weights of nano HA in powder form to penetrate different layers of the skin.

Nano Hyaluronic Acid delves deeper than traditional hyaluronic acid, targeting the deeper skin layers where volume loss occurs. It helps plump and volumize the affected areas, reducing the signs of aging. Unlike serums and creams that contain smaller percentages of nano HA and take longer to show effects, our HA Filling Powder penetrates the skin immediately, enhancing and filling sunken areas like under eyes, temples, smile lines, and other volume-needing regions.

Our nano HA Filling Powder is easily absorbed due to its small molecular weight and structure, almost melting into the skin upon application.

- High Molecular Weight – Forms a moisture barrier on the outer skin layer.
- Middle Molecular Weight – Penetrates deeper for lasting hydration.
- Low Molecular Weight – Reaches the deepest layers, storing water in skin tissues, resulting in plumper, firmer, glowing, and healthy skin.

HA Filling Powder is safe for use on any area of the face and neck! While it won't augment the jawline or cheekbones, it will improve and slow down volume loss by retaining water in the dermis, continuing to work for 3-4 days post-treatment.

HA Filling Powder can be used as a standalone procedure or as an addition to other treatments such as BB Glow, Mesotherapy, Carboxy Therapy, and more.

When incorporating HA Filler into another procedure, **it's crucial to apply the HA filler powder on dry skin** before using other ampoules.

Example: Mesotherapy

- Cleanse
- Exfoliate
- Apply HA Filler
- Use booster ampoules
- Apply repair cream

Example: Carboxy Therapy

- Perform Carboxy Therapy first
- Apply HA Filler

Use a stamping motion with a Nano, 36-pin, or 12-pin cartridge.

Recommended Needle Depths:

- Under eyes: 0.10-0.25mm
- Forehead: 0.25mm
- Mouth area: 0.25mm
- Sunken scars or other areas needing "filling" (typically where you'd use a filler): 0.25-0.50mm, depending on the skin area.

Recommendation: For clients with dark under-eye circles, wrinkles, and sunken areas, apply HA filling powder with a micro-needle, followed by Undereye Meso Solution, and micro-needle them together.

HA filler can be applied weekly with no limit on the amount used. However, excessive use may cause skin irritation. If irritation occurs, discontinue use for 14 days and apply repair cream twice daily.

PREMIUM UNDEREYE SOLUTION

The premium undereye solution is the ideal ampoule for addressing issues such as dark circles, puffiness, or sunken eyes. This ampoule can be applied with nano needles or microneedles up to 0.25mm, enhancing microcirculation around the undereye area and supporting lymphatic movement. It also stimulates fat deposits beneath the eyes, resulting in firmer skin and overall rejuvenation.

Key Ingredients:

- Hyaluronic Acid: Reduces the visibility of fine lines and wrinkles by retaining moisture in the skin, creating a plumping effect.
- Tocopheryl Acetate: Also known as Vitamin E acetate, it offers additional skin benefits. It is a powerful antioxidant that helps protect the skin from environmental stressors and promotes cell regeneration

PREMIUM BIOPLACENTA AMPOULE

Our most powerful ampoule to date contains five growth factors that mimic human placenta, including:

- EGF (Epidermal Growth Factor): Prevents and treats wrinkles and pigmentation.
- IGF-1 (Insulin Growth Factor): Slows signs of aging and thickens the epidermal skin layer.
- aFGF (Acidic Fibroblast Growth Factor): Revives dead skin cells and boosts collagen and elastin production.
- bFGF (Basic Fibroblast Growth Factor): Stimulates cell proliferation from mesodermal, ectodermal, and endodermal origins, effectively treating wounds, scars, stretch marks, and damaged skin.
- VEGF (Vascular Endothelial Growth Factor): Promotes blood vessel formation, leading to faster cell renewal and improved oxygen delivery to the skin.

These growth factors are combined with Hyaluronic Acid (HA) and vitamins to emulate the benefits of the human placenta.

MESO-BOOSTERS

Choose from six distinct Meso Booster ampoules for mesotherapy, each formulated with unique active ingredients to address specific skin concerns. These ampoules can be combined or layered for enhanced results.

Derma Acne Control Booster Ampoule is ideal for those suffering from acne and breakouts. It combats pimple-causing bacteria and aids in skin healing.

- Willow Bark Extract: A natural source of salicylic acid-like compounds, known to prevent and reduce acne breakouts.
- Liquorice Root Extract: Effective in treating various skin conditions, including acne and eczema.
- Salicylic Acid: A beta hydroxy acid renowned for its exfoliating properties and ability to regulate sebum production.

Boto-RX Ampoule is an excellent anti-aging solution that also helps minimize pores.

- Algae Extract: Ideal for hydrating, revitalizing, and toning the skin, it can also reduce or eliminate issues like acne, cellulite, and wrinkles.
- Vitamin C: When applied to the skin, Vitamin C encourages new collagen growth, maintains existing collagen, and protects this vital protein from damage.
- Glutamic Acid: Essential for maintaining the skin's pH balance.
- Pullulan: Provides an instant lifting effect, addressing age-defying needs by firming and tightening the skin to prevent wrinkles.
- Botulinum Toxin: Known by brand names like BOTOX and Dysport

Salmon DNA: The ultimate healing ampoule for damaged skin.

- Niacinamide: Reduces inflammation, alleviating redness from eczema, acne, and other inflammatory skin conditions.
- Aloe Barbadensis Leaf Extract: Not only prevents internal inflammation, but also soothes and diminishes visible inflammation on the skin.
- Betaine: Acts as an osmolyte, helping skin adapt to moisture changes and maintaining balanced hydration.
- Copper Tripeptide-1: Stimulates collagen and elastin production, promoting firmer skin.
- PDRN DNA: Naturally occurring in your DNA, it repairs damaged skin cells and boosts collagen production.

Hydro Stem Cell Booster Ampoule features Hyaluronic Acid, renowned for hydrating the skin and locking in moisture to achieve that coveted dewy look.

- Aloe Barbadensis Leaf Juice: Prevents internal inflammation under the skin, while soothing and reducing visible inflammation effects, such as redness, swelling, sensitivity, and skin infections like dermatitis and eczema.
- Brassica Oleracea Capitata (Cabbage) Leaf Extract: An anti-inflammatory ingredient rich in vitamin C, providing antioxidant benefits.
- Solanum Lycopersicon (Tomato) Extract: A potent antioxidant.
- Daucus Carota Sativa (Carrot) Root Extract: Packed with antioxidants that prevent skin from drying and becoming rough.
- Hydrolyzed Hyaluronic Acid: Enhances the wound healing process and is especially beneficial for sensitive skin types, including those with acne, rosacea, and inflammation-related skin conditions.

The White and Bright Booster Ampoule effectively lightens and brightens skin tone, making it ideal for discoloured skin types.

- Ginkgo Biloba Leaf Extract: Provides strong antioxidant protection, skin-soothing benefits, enhanced hydration, and effective anti-aging properties.
- Camellia Sinensis Leaf Extract: This green tea extract offers antioxidant and anti-inflammatory benefits, soothing and calming the skin while protecting against collagen degradation and discoloration.
- Rose Callus Extract: Derived from rose petal plant cells, it enhances skin hydration, soothes, whitens, and offers anti-aging effects.
- Hydrolyzed Hyaluronic Acid: Accelerates wound healing and is particularly beneficial for sensitive skin.
- Stearic Acid: A fatty acid serving as an emollient and emulsifier, it protects the skin's surface from water loss and reinforces its protective barrier.

Gold Peptide Booster Ampoule features 99.9% pure gold combined with concentrated peptides, effectively combating signs of aging such as wrinkles and dark spots. It also aids in brightening and lifting the skin.

- Niacinamide: Reduces inflammation, easing redness from conditions like eczema, acne, and other inflammatory skin issues.
- Stearic Acid: Protects the skin's natural barrier against water loss and supports the skin's protective function.
- Camellia Sinensis Leaf Extract: Green tea extract provides antioxidant and anti-inflammatory benefits, soothing and calming the skin while safeguarding against collagen degradation and skin discoloration.
- Ginkgo Biloba Leaf: Fights bacteria that cause acne, psoriasis, dermatitis, and eczema, including bacterium acnes, Staphylococcus aureus, and Streptococcus pyogenes.
- Allantoin: Acts as an emollient, keeping skin moisturized and preventing dryness and irritation.
