Please fill in and hit the submit button at the end of the form.

Alternatively, you can email the completed form to:
admin@rubblerockandgem.com

Cabochons larger than
10mm

Starts at
\$1.25 CAD / gram

RUBBLE ROCK AND GEM

Please select one from each option below

or

or

An inclusion is any spec of material inside your rock that isn't the subject rock. Examples of other minerals are manganese dendrites, rutile, chlorite, or iron concentrations presenting as black dots, etc. Other forms of inclusions may not be mineral – such as gas bubbles or liquid trapped inside (enhydro). Inclusions rarely compromise the structural integrity of the stone. They are either an eyesore, or make the stone 10X cooler. It is an aesthetic choice you must make.

Please note, if you chose “no inclusions” and “no fractures” above, you are asking for “completely clean stones only.” This will reduce your yield.

Maximize material means you'll let the cutters lay out and pick various shapes to maximize the amount of cabs yielded. This reduces the amount of waste and gets the most stones out of your material.

Wanting something unconventional?

Attach a detailed explanation of your desired shapes, sizes and cutting style. Physical samples are the best thing, next up are pictures. Words are third best as the cutter's are English Second Language. More detail is better when explaining, do not simplify your instructions. Contact us first, as "Custom" will require a quote.

Refer to shape options on next page.

RUBBLE ROCK AND GEM

Shapes

If “Maximize Material” was picked above, these are the types of shapes that will be used. Please select all that apply.

For orders under 500g, or for small stones, sometimes it is best to let the cutters make the executive decision. However, you can prioritize certain shapes and ask that any rough not suitable for it be left to the cutter’s wisdom.

RUBBLE ROCK AND GEM

Cut Stones Shapes

Specify desired sizes for each cut shape chosen from the previous page. If you have no specific size preference write “any.” If you wish for industry standard calibrated shapes – write “industry standard calibrated.”
