

# UTE MATTING

# INSTALLATION GUIDE

1. Clean the ute tray before installing.  
You will need a measuring tape, knife, straight edge cutting guide, \*optional: small & large diameter circle template, marker.

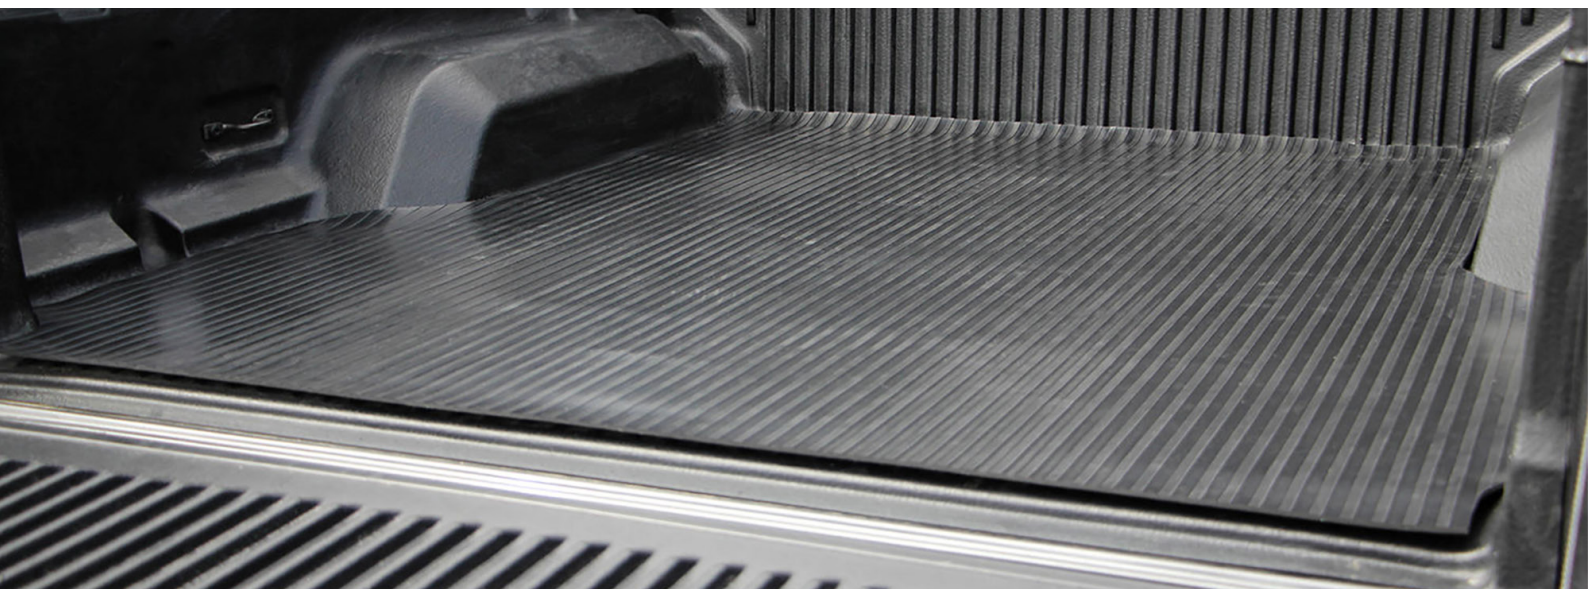

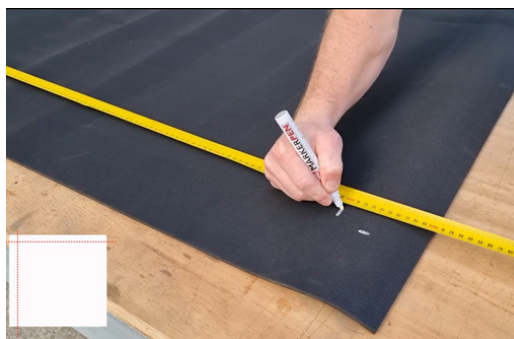

2. Unroll the rubber matting & lay out to settle it flat. (Make sure the area where you are going to cut the mat is ok for cutting with a knife.)

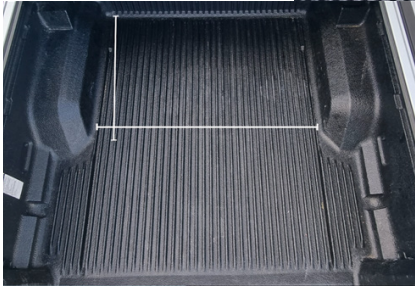

3. Measure the longest length & width dimensions of your ute tray.

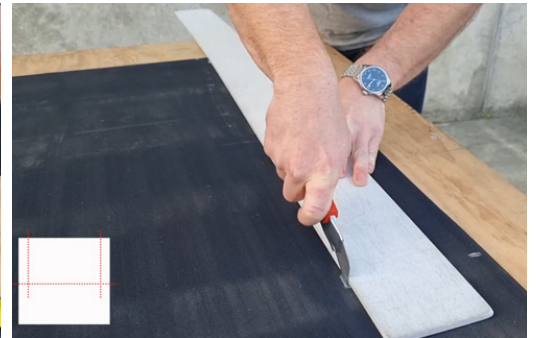

4. Mark out the measurements on the rubber matting, and then cut down the matting to size, using the straight edge & knife.

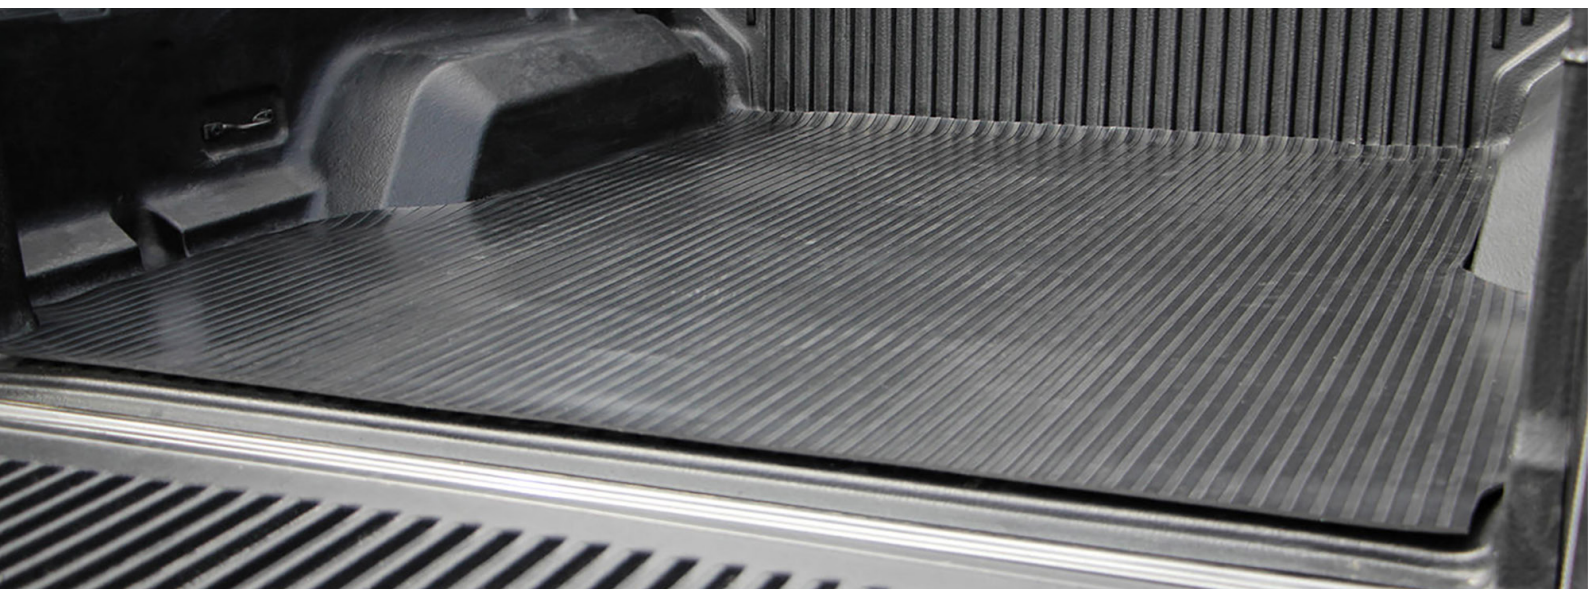

5. Next measure the width & depth dimensions between the wheel arches.

6. Again, mark out the measurements on the matting and cut off the excess rubber.

7. For best results, use the large diameter circle template to cut around the wheel arch.

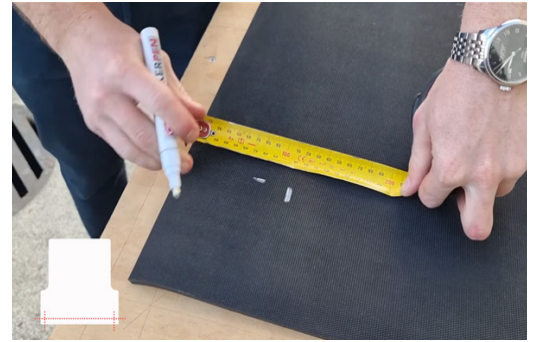

# UTE MATTING CONT.

# INSTALLATION GUIDE

8. Next measure & cut the bottom corners to fit the tray.

9. Use the small diameter circle template to cut and round off the other corners to give it a nice finish.

10. Now place your mat in your tray & enjoy!
