

# UV RESIN Black and Gold Glitter Hoop Earrings

**SKILL LEVEL 2 | Less than 15 Minutes**

## **TOOLS:**

- (10627461) UVR UV Lamp White
- (10627494) UVR Tool Tweezers
- (10627491) UVR Tool Mixing Kit

## **MATERIALS:**

- (10627628) UVR Flat Mold Hoop Earrings
- (10628088) UVR Glitter Filler Metallic Flakes
- (10628089) UVR UVR Glitter Filler Galaxy Flakes
- (10627463) UVR Resin 60g

## **DIRECTIONS:**

- 1** Make sure mold is clean, dry and free of dust. Use two small silicone cups to mix glitters. In one cup, add resin with gold flakes. In another cup, add Resin with Black Glitter. Stir each to combine.
- 2** Pour the Gold Flake Resin into the mold, filling the cavity 1/2 of the way. Immediately, pour the Black Glitter Resin into the other side of the mold. Cure under the lamp for several minutes.
- 3** Pour additional Glittered Resins to fill the mold to the top. Cure the mold under the UV Lamp for several minutes until completely cured. Cool for 1-2 minutes. De-mold the shapes by popping them out of the mold. If still slightly tacky, cure again under the UV light.
- 4** Place a drop of the UV Resin on the side of the hoops and place the flat pad earring finding. Cure under the light to "glue" the finding on.
