

UV RESIN Nature Daggers Drop Necklace

SKILL LEVEL 2 | Less than 15 Minutes

TOOLS:

- (10627461) UVR UV Lamp White
- (10627494) UVR Tool Tweezers
- (10627491) UVR Tool Mixing Kit

MATERIALS:

- (10627633) UVR 3D Mold Dagger with Caps
- (10627425) UVR Preserved Baby's Breath Purple
- (10627100) UVR Wildflower Pink
- (10506394) Bead Landing Chain Necklace Gold
- (10627463) UVR Resin 60g

DIRECTIONS:

- 1 Make sure mold is clean, dry and free of dust. Pour UV Resin into the mold directly from the bottle into the mold, filling the cavity less than 1/3 of the way.
- 2 Pre-cure under the lamp for one minute.
- 3 Add dried flowers and leaves, placing them precisely with tweezers. Take your time to move each element in place, making sure that no air bubbles get trapped underneath. Keep in mind that the bottom-most part of the molded piece is the FRONT. Front-face your design and flowers toward the bottom of the mold.
- 4 Pour additional Resin to fill the mold to the top.
- 5 Cure the mold under the UV Lamp for several minutes until completely cured. Cool for 1-2 minutes. De-mold the shape by popping it out of the mold. If still slightly tacky, cure again under the UV light.
- 6 Place UV Resin at the top of the molded piece where the metal finding will sit. Cure under the light to "glue" the finding on.
- 7 Slide completed pendant onto necklace.
