

*The Elim NailFX is a radical treatment combining the natural forces of science and nature. This product is full of natural ingredients which have antibacterial properties*

## Elim NailFX

### WHAT MAKES ME DIFFERENT?

Undecylenoyl Glycine can control the acidity of the nail which blocks bacterial growth. The success is in the combination of natural ingredients with scientifically proven actives.

### HOW DO YOU APPLY ME?

Apply one drop twice a day to a clean nail bed. Do not wipe. Allow to dry. Use for 28 days

### WHAT ARE MY ACTIVES AND BENEFITS?

**Undecylenoyl Glycine** is a natural substance derived from sunflower and oat proteins. This is added to NailFX for two reasons: It is a natural antibacterial which can help control bacterial infections, Undecylenoyl Glycine also helps to support the natural acidity of the skin, making it more difficult for secondary bacterial infections to start

**Tea Tree Oil** is well known for its antiseptic properties. It is also a natural antibiotic.

**Triclocarban** is an antimicrobial active to reduce harmful bacterial on the nail.

**Ethoxydiglycol** is added to the formula as a solvent to make NailFX easier to apply to nails

**Propylene Glycol** provides increased moisturizing ability and helps to spread the formula evenly by acting as a lubricant

### HOW MANY TREATMENTS DO I GET

Usage:  
When applied as described. NailFX contains enough product for up to 30 applications.

### I AM AVAILABLE IN THESE SIZES

Professional                      -20 ml (0.68 fl. oz)
