Attention macOS XQD users

1. Download Mac XQD driver from the link below:

https://www.sony.co.jp/Products/memorycard/xqd/application/drv_installer.html

2. Double-click "XQD_Drv_Installer_mac_v200.dmg", which is usually located in the "Downloads" folder.

3. Double-click "**XQD Device Driver Installer v2.0.0.06260**" from the pop-up window to start XQD driver installation for your Mac.

4. Follow instructions on-screen to install XQD driver. *Attention!!! Please read step below before proceeding*

5. During the XQD driver installation, you will encounter a pop-up window stating "**System Extension Updated**" (*macOS Big Sur*) or "**System Extension Blocked**" (*macOS Catalina*). *Attention* DO NOT click "**OK**", instead "**Open Security Preferences**" and "**Allow**" system software from "**Sony Corporation**" to load. If you do not see the pop-up window, still go to "**Security&Privacy**" and check/allow system software from "**Sony Corporation**" to load.

6. You will then see a pop-up asking to restart system. Click "Restart"

7. You will see "The installation was successful" message. Click "Restart"

8. Connect reader and insert a XQD card. Mac should now recognize the XQD card.

9. If you do not see any "System software from developer "Sony Corporation" was blocked from loading." message in "Security & Privacy" setting, proceed to the next step.

10. From the **Apple menu**, select **File** \rightarrow **Find**
