enjoy perfection

# Enjoy the easy life

Mowing the lawn? Trimming the edges? Let's be frank, there are more enjoyable things to do in your free time. With Royal Grass®, you will have more time to enjoy those things. With no effort, your grass will always look perfectly mown and tended. Even better: Royal Grass® doesn't need a drop of water, no matter how hot or dry it is. Which means you can enjoy a beautiful lawn with minimum maintenance.

## The advantages

- A beautiful green lawn all year round - without water and with minimum maintenance.
- A lawn that can withstand intensive use without developing bald patches or brown spots.
- Go ahead and sell your lawn mower! You will no longer need it, nor will you have to deal with the annual cost of watering, spraying and reseeding.
- The best part is, you can install artificial turf where normal grass will not grow, whether in the shade, under a roof or even on a balcony or roof terrace.
- Royal Grass® feels wonderfully soft to the touch and has a guaranteed long life span, as well as a 9-year warranty on UV-stability and colour fastness.

## V-shaped fibres with MiNT technology

As we are continuously striving to improve our grass and research possibilities for better performance and a more natural look, we looked even closer to natural grass than anybody ever did before. Here we noticed the microscopic nerves on natural grass blades. The micro nerve technology (MiNT®) results in a fibre which not only has great resilience and less reflection, it also has the best natural looks and soft feel at the same time.

TECHNOLOGY®

## Focus on quality and safety

The fibers from TenCate used for the production of Royal Grass® have been investigated according to the stringent German standard DIN 18035-7 in a testing scheme in which all applied polymer compositions and colors were represented. This means that no lead, cadmium, chromium total, copper, mercury, zinc or tin above the strict minimum limits, was found to leach into the groundwater.

Furthermore, a qualitative health risk analysis was conducted in 2005 by Dutch organisation TNO (organisation for Applied Scientific Research) to establish the possible dangers related to the use of Royal Grass®. The following exposure situations were covered:

- Inhalation of substances released at high outdoor temperatures (max 50 degrees C°).
- Inhalation of substances released in a fire.
- Eye contact with fibers.
- Drinking water containing leached materials from Royal Grass® fibers and backing.
- Contact between damaged skin and fibers.
- Swallowing / sucking on Royal Grass® fibers.

**The conclusions based on the qualitative risk assessment of Royal Grass® products confirm that they are safe for use in all recommended applications.**

DESA PAR

## Environment inspires

As market leader, Royal Grass® takes its responsibility seriously. Royal Grass® strives for zero waste and where possible, Royal Grass® re-uses and recycles materials. Royal Grass® contains no harmful toxins or heavy metals. But even better, you have the option to choose products that are 100% cradle-to-cradle thanks to newly developed production techniques.
