

# Why P💩💩p?

It's true: ThaenaBiotic®'s primary ingredient is poo! Before you crinkle your nose, let's take a closer look.

In creating ThaenaBiotic®, a complex and comprehensive microbiome support, we harness the incredible power of the human microbiome. We sterilize the stool of individuals who we believe are extraordinary embodiments of health and extract the components that have the potential to supercharge our guts' health.

Think of it like a microbial treasure hunt – we're after those hidden gems within the stool (the postbiotics), which hold the key to a balanced and thriving gut ecosystem.

Just as compost enriches and revitalizes soil, human stool has the potential to shift outcomes and change lives.

We're not just selling a product; we're on a mission to optimize gut health. So, join us here in the Thaenaverse™ and embark on a journey towards a healthier, happier you!

CLIENTS MAY EXPERIENCE TRANSIENT ABDOMINAL DISCOMFORT AND CRAMPING WHEN TAKING THAENABIOTIC®.

# EAT SHIT

# AND THRIVE

ThaenaBiotic® is a novel, stool-derived postbiotic supplement designed to support microbial balance

PROFESSIONAL USE ONLY

## Pre-, Pro-, and Postbiotics: What's the Difference?

While prebiotics, probiotics, and postbiotics all relate to gut health and the microbiome, they are different and each serve distinct roles. These are our definitions:

> **Prebiotics** are special fibers, polyphenols, and nutrients in the food we eat that nourish good gut bacteria and are not absorbed through normal digestion.

> **Probiotics** are live bacteria that are consumed to maintain a balanced gut microbiome. When these bacteria eat and metabolize prebiotics, they create essential metabolic byproducts called postbiotics.

> **Postbiotics** are the metabolic byproducts from the fermentation process of our gut's probiotic bacteria. They are an entire ecosystem of communication molecules and can have various positive impacts on health.

ThaenaBiotic® is a stool-derived complex postbiotic, containing an ecosystem of postbiotic signaling molecules plus prebiotic fiber, heat-killed probiotics, and cell fragments.

## The Next Generation of Microbiome Support

When we talk about the *microbiome*, we mean the complex ecosystem of microorganisms (or "microbes") that live in and on us.

The role of our gut microbiome is intricate and interconnected and it impacts nearly every system in our bodies. *When our gut microbiomes are imbalanced, usually so are we.*

**ThaenaBiotic®** was created to address these imbalances by introducing a broad spectrum of beneficial microbes derived from Thaena's healthy donor population to replenish and rejuvenate the gut ecosystem and, ultimately, relay signals of health to our bodies.

## How to Order ThaenaBiotic®

ThaenaBiotic® is a professional use only supplement — it is not sold directly to consumers (who we call *clients*).
