Clarify

Aqua One Clarify is a polymer based flocculant that binds fine particles in aquarium water so that they can be more readily removed by mechanical filtration and gravel syphoning. By removing these fine particles water will become clearer and odours will be reduced.

pH Up & pH Down

Aqua One pH Up and pH Down assist in the adjustments to pH in your aquarium. pH is the measure of alkalinity and acidity within a liquid. pH measured on a scale from 0 - 14 with 7 being neutral, 0-6.9 is acid, 7.1 - 14 is alkaline. Each change in one pH unit reflects a tenfold increase or decrease in the pH value e.g. pH 10 is ten times more alkaline than pH 9 and one hundred times more than pH 8. It is therefore extremely important to make adjustments to pH slowly.
