					1ml/L	2ml/L	2ml/L

Flush 3-5 days before harvesting!

FEED CHART

WWW.HOUSE-GARDEN.COM.AU

Always take the EC/PPM value first. EC/PPM values of base water differ per region. All measurements are per metric litre. Using a Conductivity or PPM meter is highly recommended, as is the monitoring of PH values. Maintain a PH range between 5.5-6.5.

Do NOT use Amino Treatment and Algen Extract at the same time. Do NOT use Shooting Powder and Top Shooter at the same time. Do NOT mix nutrients / additives in concentrated form. Use Foliar Spray a maximum of twice per week. Use PH Stabiliser for RO and pure water systems only.

Add a mycorrhizae product 2-4 times during plant's life cycle to ensure healthy beneficial bacteria in the root zone.

Use H&G House Clean to clean room and equipment between cycles.
