

# HYDRO FEEDING SCHEDULE

- Applications are based on 10 Litres of water. Rates are for part A and part B. (e.g. WEEK 1 is 20ml Part A and 20ml Part B)
- The EC target is based on RO or demineralised water. Tap water quality may vary depending on location. This will affect final EC readings.
- The supplements and plant boosters are organically based and can safely be used at higher dosage rates.
- This feeding schedule should be used as a guide only. Growers should continually monitor their plants and establish their own ideal growing conditions. Consult with your local hydroponic store for further advice.

## PH RANGE 5.8-6.5

|                     | Nutrient                       |                               |                                                                                             | Nutrient Supplements                                          |                                                                 | Plant Boosting Supplements                                                                                          |                                                                                           |                                                 | Specifications |     |
