

Customized Stretch Wrappers with Advanced Technology since 1994

## SPLIT BASE OPTION FOR LARGE LOADS AND/OR SCALE MOUNTING

The Split Base Option is recommended:

- When the customer has an existing 4' x 4' platform scale that functions properly and wants to continue using it. The separate turntable can be mounted on top of the existing or a new scale provided by others.
- For larger load sizes, the split base is an alternative to needing a base extension.

### HP2100-SRT SPLIT BASE OPTION FOR LARGE LOADS

### NOTES:

- Cousins Packaging can supply a new platform scale assembled and shipped with the turntable.
- The Split Base Option is only available on our high profile turntable models HP-2100-SRT, HP-SW and HP-1100-S. Not available for LP (low profile) models.
- With a factory quote it can be added to the fully automatic A-Arm (HP-SWA) if the application is approved by our engineering department.
- Large loads may require increasing the output speed of the film carriage.

OHOSP-3/4	High Output Speed Prestretch with 3/4 HP motor upgrade
