Testosterone Enanthate vs Cypionate vs. Propionate vs. Sustanon. the body. Because the body metabolises free testosterone in a matter of hours, The best way to simulate the bodies' natural testosterone production would be to administer it around the clock in the form of an I.V. drip. As you should know already, Testosterone Propionate is an injectable steroid that works faster than Enanthate and Cypionate. An oil-based substance the propionate ester slows the entry into the system from the injection location. This slowing will only last for a few days but causes the Testosterone Propionate to work faster but does require a.

Testosterone cypionate is

suspended in cottonseed oil and carries a half-life of 10 - 12 days, requiring fewer injections than testosterone enanthate. Most men will find that their shots are as infrequent as once every 10 to 14 days. Testosterone Propionate. Testosterone propionate is the oldest form of injectable testosterone, and its half. Sciroxx's Testodex Cypionate is 100% comparable to the Watson, and at 100mg every 5 days I get the same serum levels as with the Watson (roughly 1200 ng/ml) The Testodex is silky smooth, unlike many UG products, and for the price is offered, and with domestic delivery I couldn't ask for more. Testosterone Enanthate Reviews: Good product!!

They are both classified as slow-acting testosterone esters with a release time of between 10 to 14 days. One version (cypionate) is suspended in cottonseed oil and has an 8-carbon ester chain, while the other (enanthate) is suspended in sesame oil and has a 7-carbon ester chain. But while they are widely considered to be interchangeable for. [source](#)
