

Zeo-Go Directions

Toilets - caravans, RVs and boats

20 Lt holding tank: cover the bottom of the tank with water, then add three scoops of Zeo-Go. Add more or less according to the capacity of your tank and frequency of use. If you go camping and dig a hole in the bush, sprinkling Zeo-Go into the hole before filling it will improve the environment.

Dog Excreta

Sprinkle Zeo-Go onto the dog poo and leave for about 30 minutes or longer, even overnight. After removing the poo, sprinkle more Zeo-Go lightly onto the patch of lawn where it was. If you have burnt patches on your lawn from dog urine, sprinkle Zeo-Go on top and water it in thoroughly as the zeolite will take up the ammonia and return it to your lawn as nitrogen. If you have artificial turf, sprinkle Zeo-Go over the top of smelly patches or distribute a layer over the whole lawn. Economy packs are coming soon!

Kitty Litter

Sprinkle a scoop or two of Zeo-Go onto the kitty litter, and stir through with the litter shovel. If the wee has soaked through to the bottom of the tray, sprinkle Zeo-Go there before spreading kitty litter back over it. Zeo-Go works best with softwood and other natural kitty litters.

Outdoor poos: After removing, sprinkle the patch of garden or lawn with Zeo-Go to avoid the possible transmission of toxoplasmosis. When disposing of cat poo in the garbage bin, sprinkle Zeo-Go over it before wrapping to reduce the odour. If you add the used litter to your garden, the zeolite content will convert the ammonia to nutrients and make them available to your plants.

Mould

Place Zeo-Go in bowls or muslin bags and leave in rooms or cupboards to help remove mould odour and spores from the atmosphere. Recharge the zeolite sand by spreading it onto a baking sheet or tray and leaving in direct sunlight for 4 or 5 hours or heat in the oven at 180°C for 30 minutes.

Algae

Scatter Zeo-Go liberally over the surface of small ponds to help control the growth of algae. One application should be enough to get rid of the algae. Top up if and when necessary.

Oil spills

Sprinkle Zeo-Go thickly over the oily area, leave until the oil has been soaked up then sweep clean. and even works well on old oil spills, even though you may have to repeat the application.

BBQ drip trays

Spread Zeo-Go fairly thickly in your BBQ drip tray to catch the fat. Dispose of used Zeo-Go in the garbage, not the garden or compost.

Odour control

For bait boxes or similar, spread Zeo-Go over the area and leave overnight. Dispose of zeolite in the garden or bin. Wash bait box. Repeat if necessary. Put a bowl of Zeo-Go in the fridge and in bins. Recharge occasionally, see Mould above for recharge directions.

Pot plants

Zeolite stores and releases nutrients and water to plants when needed. Add a scoop of Zeo-Go to the root zone when potting plants.
