

Wiring diagram for the Webasto room thermostat for heating systems

The wiring loom to the timer is made up of four wires: 1 Red, 1 brown and 2 Black wires.
Red=Positive
Brown=Negative/Earth
Black= Switch wires for the heater. These are connected together in the loom and therefore need to be joined together as shown in the diagram. Do not connect to just one wire as the timer will continue to signal the heater, by-passing the thermostat.
