

**DLS-1 RETICLE**

Precise target point covers only 0.03 MIL (3 mm) at a distance of 100 m! 0.005 Mil (0.5mm) crosshairs in the horizontal and vertical have markings spread in increments of 0.2 and 1 Mil (20 and 100 mm/100m respectively) for quick and easy adjustments to the projectile drop and windage correction. This second focal plane reticle will do exceptionally well at lower magnifications (7 - 10x), when the target point is 0.17 - 0.12 MIL (17-12 mm) respectively, also due to the convenient day-night illumination.

**Calibrated ranging magnification: 40x**

**MIL @ 40x**
