

“For many years now I have always recommended the use of “Natural Products” to fanciers in helping them to build and maintain their bird’s health and immunity. Among all the different products, the one that in my mind stands out is the Oregano product made by Anpario called “Orego-Stim”.

Oregano is a herb that contains compounds that have potent antibacterial properties that help to protect and support the immune system. Rich in antioxidant and antibacterial properties, Orego-Stim is a product that I believe pigeon fanciers should not be without. While not a cure for diseases, it will assist normal healthy pigeons to build and maintain their health all year round if given daily.

Orego-Stim can be used to help birds under disease challenges as well as providing support for the respiratory and digestive systems. Over the years that I have been using Orego-Stim I have not had to treat my birds with antibiotics, this is not to say that this may always be the case. But once the birds are clear of all the various infections and/or viruses Orego-Stim helps them stay that way.

Many fanciers have commented on the overall appearance of my birds, and those that have purchased race teams and/or stock birds from me have always been pleased with their overall health. Over the years there have been many friends along with other fanciers that I have recommended Orego-Stim to and that have commented on how pleased they are with their birds since using it. Breeding, moulting and/or racing I believe this product to be invaluable in helping to keep your pigeons in top condition all year round.

If you haven’t tried it yet, then do yourself a favour and give it a go. It is very economical to use compared with many other products, and I feel sure as with many other users you won’t be disappointed. For those with internet connection do yourself a favour and “Google” the health benefits of oregano. There’s some great information there to read.

Regards, Paul Gibbs.”
