

SHURIKEN 250

Quick Start Guide

Features

IMU inner dampin built-in

Integrated Flight Controller
pre-loaded with Cleanflight

Integrated 40 channel 5.8GHz Video Tx

Intergrated MWOSD

Ultra-thin & integral profile with lower air resistance
and more solid structure

VTx power switch 25mw/600mw
easy switch when racing

7-segment display for VTx band switching
more intuitive and convenient for adjusting

Technical Specification

Flight Controller

IMU

MPU6050, 3axis Gyro, 3axis Accelerometer

Firmware

Cleanflight

CPU

STM32F303 32-bit-cortex M4 core processor

Video TX Features

Transmitter Module

Integrated, 5.8GHz module

Channels

40 Initially

Bands

5, including RaceBand

Power Output

25mw or 600mw

Weight and Size

Weight, as shipped, ARF

- 465g

Weight, Typical RTF

*- 617 g with 1300mAh 4s pack
and SPK. Sat. receiver*

Size

250mm between diagonal motors

Technical Specification

Power

Standard prop

5045

Race Motors

2205-2550kv

Recommended Battery

1300mAh 4S

ESC

Type

Blheli

Rating

30A continuous, 40A peak 2-4s

Feature

Oneshot125, and Motor Braking

Camera

Video Standard

*PAL or NTSC, switchable using
a camera-mounted jumper*

CMOS

700TVL

R/C Receiver

Channel Required

*Absolute minimum four
Five recommended to support mode switch*

Interface

5v S. Bus, 3.3v SPK. Sat, or 5V PPM sum

Step One:

Bind or install compatible R/C receiver

DSMX binding Procedures

Power on the Shuriken250
then press the bind button,
the DSMX.sat receiver will enter the binding mode

FASST binding Procedures

- 1 Turn on the transmitter
press the bind button and power on the Shuriken250
the LED will blink red when the aircraft is ready to bind
- 2 Release the Bind button, the LED will blink
red and green alternately for a while
and then stay green
which indicates the binding is successful
- 3 Please try again if it doesn't work.
A still red LED means the binding is not done properly

Frsky RX bind Procedures

- 1 Turn on the TARANIS
and enter the bind mode (MENU>PAGE>@...find 'Bind'>ENT)
- 2 Connect battery to the Shuriken holding bind button on the Shuriken
The LED on the receiver will flash
indicating the binding process is completed
- 3 Turn off both the transmitter and the receiver
- 4 Turn on the transmitter and connect the battery
the green LED on the receiver indicates the binding is successful.

Cautions:

When the binding is done,
Please check the directions of each channel on the transmitter
Before you unlock and fly it,
Make sure the directions are all correct
Dangerous situations will arise if the direction is reversed

Shuriken250Pro is also compatible with CPM receivers
you can setup on Cleanflight configurator
It is not compatible with standard R/C receivers
with multiple channels of PWM out

Step Two:

Setup the Video Link

- 1 The Shuriken250 uses a button to define video TX channels
- 2 The Shuriken250 ships with a default TX frequency of 5740MHz which corresponds to FatShark frequencies Channel 1
- 3 To switch bands press the button, hold 2 seconds and release
- 4 To switch channels short press the button
- 5 The left 7-segment display is band number the right 7-segment display is channel number

BAND

CHANNEL

		1	2	3	4	5	6	7	8
F	IRC/FS	5740	5760	5780	5800	5820	5840	5860	5880
C	RaceBand	5658	5695	5732	5769	5806	5843	5880	5917
E	Band E	5705	5685	5665	5645	5885	5905	5925	5945
B	Band B	5733	5752	5771	5790	5809	5828	5847	5866
A	Band A	5865	5845	5825	5805	5785	5765	5745	5725

Step Three:

Setup the flight controller via Cleanflight configurator

- ✔ Install latest Silicon Labs CP2102 USB to UART Bridge VCP Drivers
<http://www.silabs.com/products/mcu/pages/usbtouartbridgevcpdrivers.aspx>
- ✔ Install and launch the Cleanflight Configurator tool
<https://chrome.google.com/webstore/detail/cleanflight-configurator/enacoimjcgeinfnnnpajinjgmkahmfgb>
- ✔ Connect Shuriken 250 to computer via USB cable
- ✔ Select the correct COM port if it is not automatically detected
- ✔ Click connect, verify that communication is established.

How to play:

USB Function Switch

USB for Flight Controller

USB for OSD configuration

OSD ON/OFF Switch

Press button to switch OSD on/off

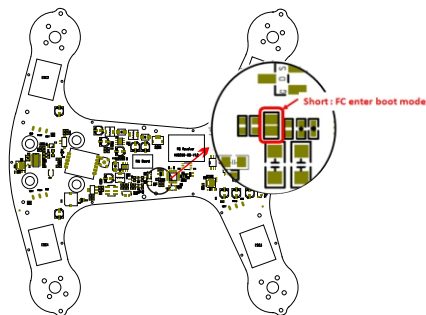

Vtx power switch 25mw/600mw

The out put of VTx is available for 25mw and 600mw you can choose the output value for VTx using the jumper

How to enter boot mode

Firmware Upgrade

Click the Firmware Flasher tab

Select the latest SPRacingF3 stable release

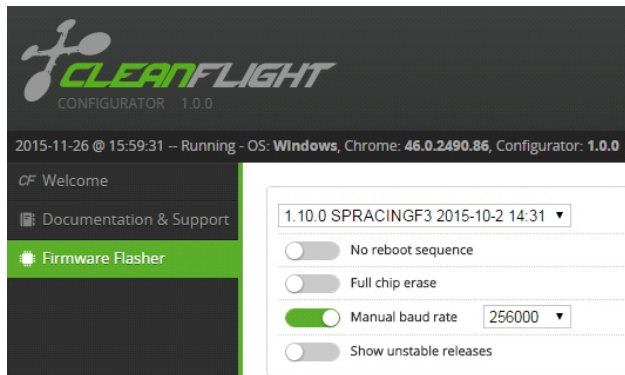

Set the flashing baudrate to 256000

Click 'Load firmware [Online]'
and wait for firmware to download
and read release notes

Click 'Flash Firmware'

The screenshot shows the Cleanflight Configurator interface. At the top left is the Cleanflight logo with the text 'CLEANFLIGHT CONFIGURATOR 1.0.0'. Below the logo, the status bar indicates '2015-11-26 @ 15:59:31 -- Running - OS: Windows, Chrome: 46.0.2490.86, Configurator: 1.0.0'. A sidebar on the left contains three menu items: 'CF Welcome', 'Documentation & Support', and 'Firmware Flasher', which is highlighted in green. The main content area displays the selected firmware version '1.10.0 SPRACINGF3 2015-10-2 14:31' in a dropdown menu. Below this are four settings: 'No reboot sequence' (disabled), 'Full chip erase' (disabled), 'Manual baud rate' (enabled, set to 256000), and 'Show unstable releases' (disabled).
