Grooming Tips

Brush

Make sure to brush your dogs fur with a slicker brush and a comb

Brush all parts of the dog, ears, legs, tail and armpits.
Using the comb helps you find any knots

You want to be going over your dogs fur with the brush and the combas often as possible as this helps them get used to the process

Brushing your pet is the BEST way to prevent matting

Bathing

Bathing your dog helps prevent knots! You want to wash out mud, grass, and any things the fur might have picked up.

Why Prevent Mats?

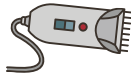

Matting is a painful condition that can lead to health concerns.

Mats trap moisture by cutting off airflow through the hair which can cause irritation and sores

If your dog's ears become matted the blood vessels can rupture and cause a hematoma

Dematting can be an uncomfortable process. If the matting is severe, clipping the hair may be a safer option than brushing

If you need help please let us know. We will be more than happy to show you the proper way to maintain your pets coat!
