

# solid wood varnished & lacquered

## MAINTENANCE

Wood is a natural and porous material, and continues to absorb and release humidity throughout its life through expanding and contracting.

Variations in wood grain, texture and colour, knots and other natural occurring characteristics are considered inherent to natural timber furniture.

Do not place hot or cold items directly on the surface. We recommend using placemats, tablecloths, pot holders and the like. Do not place your timber furniture in direct sunlight, as this can change the colour of the timber. Avoid exposure to the elements, excessive damp or humid conditions, and keep the timber away from air-conditioners and heaters.

## cleaning, stains & spills

Always remove stains immediately, with a blotting action using a clean, damp white cloth.

For regular dusting, use a slightly damp cloth or a clean duster. Move the cloth in the direction of the wood grain.

To clean, use a mixture of mild ph-neutral soap and clean water. Gently dip the cloth into the mixture and wipe down the surface in the direction of the wood grain. Dry immediately with a clean, dry, non-abrasive cloth. Always dust your timber furniture prior to cleaning. If using cleaning detergents, always test them first in a concealed spot.

Do not use cleaners or cleaning agents that are abrasive, caustic or acidic, such as bleach or ammonia, as these may affect the colour of the timber or polyurethane.
