

# glass

## MAINTENANCE

Glass is a useful material, and can withstand most household cleaning agents.

Whilst glass is heat-resistant, we do not recommend placing hot items, such as tea lights, pots or other hot objects, directly on the surface.

Glass is not resistant to scratches or chips. We do not recommend dragging anything across the surface, or abutting the glass against a hard or abrasive surface.

### cleaning

We recommend wiping your glass table top with a clean, dry, lint-free cloth. For mirrored surfaces, these can be cleaned with a lint-free cloth. To remove stubborn marks or stains, you can use a household glass cleaning product such as Windex.
