

terrazzo

MAINTENANCE

Terrazzo is a composite material, made of cement or epoxy with chips of marble, quartz, granite, glass, shell or other suitable materials. It is then polished to a smooth texture. Variations in colour, texture and chips are an inherent feature, and are not considered a defect.

Terrazzo is not scratch proof – small nicks and/or scratches are considered general wear and tear, and are not covered under warranty. Avoid dragging items across the surface.

cleaning

Use a soft cloth for regular dusting and cleaning. Avoid using abrasive or acidic cleaners, such as detergents, as these can be harmful to the terrazzo.

Remove any stains immediately, as these can penetrate the surface of the terrazzo. Gently blot the stain with a soft cloth, then clean.

For stubborn stains, use a specialty terrazzo cleaner.
