Care & Maintenance

Marble

Marble is a natural and porous stone. Each piece of marble is unique, and has inherent qualities that will vary from piece to piece, including veining, tint, and density. Minor pitting and/or surface fissures are a normal characteristic of natural stone, and are not considered defects. Marble is not scratch proof – small nicks and/or scratches are considered general wear and tear, and are not covered under warranty. The surface of your new marble product should not come into contact with hot and/or moist/wet containers or materials. It is recommended to use coasters, placemats and the like to avoid any marks or stains from heat and/or liquids.

Like most natural materials, natural stone needs care and maintenance to ensure its long-lasting appeal and hand-feel. Always wipe up any liquid spilt onto the surface immediately, especially acidic substances (coffee, citrus, alcohol) as they may leave permanent marks or stains if left to penetrate the surface. If a stain has become permanent, the stone would need to be sent to a professional for repair. When cleaning, use warm water and mild soap, we recommend detergent free. Afterwards, wipe off with a damp cloth and finish by drying with an absorbent towel. Avoid wiping off the liquid when cleaning spills, as this will only spread the spill. Instead, gently dab as you clean.

Brass

Brass is a metal made from copper and zinc. Brass will naturally oxidise from the moment it is exposed to air, often already displaying dark spots before use. This is not a flaw, but rather a natural characteristic of solid brass. For regular dusting, use a dry cloth. For cleaning or in case of a spill, use a damp cloth, and wipe with a dry absorbent towel. To help improve the signs on oxidisation we recommend using products such as Brasso, and following their instructions on application.

Mirror Glass

We recommend to keep movement to the mirror, to a minimum to avoid any possible damage. To clean mirror glass, use a soft clean cloth with warm water, followed by quickly drying with a dry soft cloth to avoid streaks. Do not allow the edges of mirror to remain wet for extended periods of time. Do not use acidic cleaners on the mirror, and never use abrasive cleaners or steel wool.
